Title: The Klingon Dictionary (2nd edition)
Author: Marc Okrand, }199
Published: New York: Pocket Books, Simon & Schuster Inc.
[2000] Charset: ISO-5589-1, OCR-scanned from original.
[2000-10-19] Changed some commas (found with `grep ", [A-Z]"') to
periods.
[2000-11-01] Added the Klingon-English dictionary section & front/back
cover.
[2000-11-06] Added the English-Klingon dictionary section.
[20020116] Changed some minor spelling errors.

## INTRODUCTION

Klingon is the official language of the Klingon Empire. For a long time, only a few non-Klingons were able to learn enough about the language to engage in a meaningful conversation with a Klingon. Recently, however, under the auspices of the Federation Scientific Research Council, a study has been undertaken to record and analyze the language and culture of the Klingons, with the ultimate goal of preparing an encyclopedia, as well as teaching materials. This dictionary represents the initial results of that effort.

The dictionary is divided into two main parts: grammatical sketch and dictionary proper.

The grammatical sketch is intended to be an outline of Klingon grammar, not a complete description. Nevertheless, it should allow the reader to put Klingon words together in an acceptable manner. Many of the rules given in the grammatical sketch are those set down by Klingon grammarians. It should be remembered that even though the rules say '`always'' and '‘never,'' when Klingon is actually spoken these rules are sometimes broken. What the rules represent, in other words, is what Klingon grammarians agree on as the '`best'' Klingon.

Because research is not yet completed, this dictionary is of necessity somewhat limited in scope. There are certainly more Klingon words than those listed here. Three groups of [[p.10]] words in particular are, for the most part, unrepresented: scientific terminology; words for native tools, customs, flora, and fauna; and vocabulary dealing with food. Terms associated with the various sciences are the subject of a special study, and a report is currently being prepared. Klingon words for traditional tools and long-standing customs are difficult to translate into English. Native plants and animals are likewise difficult to comprehend at the present time. Such matters will be fully elucidated in the forthcoming <Klingon Encyclopedia.> Food words are missing due to limited resources: there have been problems recruiting staff interested in studying Klingon eating habits. Until that study is under way, it was thought inappropriate to present a list of words whose meanings are not properly understood.

As more data are gathered the list of words will undoubted-
ly grow. Even at this early stage, however, some patterns are emerging. For example, there are no words for greetings, such as <hello, how are you, good morning,> and so on. It seems apparent that such words and phrases simply do not exist in Klingon. When two Klingons meet each other (except in cases where military protocol determines behavior), if anything of an introductory nature is said, it is an expression that can best be translated as <What do you want?> Unlike most speakers of English, who begin conversations with greetings, inquiries about the state of health of the conversants, and remarks about the weather, Klingons tend to begin conversations by simply stating the main points.

Although Klingons are proud of their language and frequently engage in long discussions about its expressiveness and beauty, they have found it impractical for communication outside the Klingon Empire. For intra- and intergalactic communication, the Klingon government, along with most other governments, has accepted English as the lingua franca. In general, only those Klingons of the upper classes (which include higher-level governmental and military officials) learn English. As a result, English has taken on two additional functions in Klingon society. First, it is used as a symbol of rank or status. Those Klingons who know English will use it among themselves to show off their erudition and make their place in society known to all who happen to be listening. Second, English is used when it is thought best to keep[[p.11]] servants, soldiers, or even the general populace uninformed. Thus, on a Klingon vessel, the commanding officer will often speak Klingon when giving orders to his crew, but choose English when having discussions with his officers. On the other hand, a Klingon officer may use Klingon in the presence of non-Klingons to prevent them from knowing what is going on. This use of Klingon seems to be quite effective.

There are a number of dialects of Klingon. Only one of the dialects, that of the current Klingon emperor, is represented in this dictionary. When a Klingon emperor is replaced, for whatever reason, it has historically been the case that the next emperor speaks a different dialect. As a result, the new emperor's dialect becomes the official dialect. Those Klingons who do not speak the official dialect are considered either stupid or subversive, and are usually forced to undertake tasks that speakers of the official dialect find distasteful. Most Klingons try to be fluent in several dialects.

Some dialects differ only slightly from the dialect of this dictionary. Differences tend to be in vocabulary (the word for <forehead,> for example, is different in almost every dialect) and in the pronunciation of a few sounds. On the other hand, some dialects differ significantly from the current official dialect, so much so that speakers of these dialects have a great deal of difficulty communicating with current Klingon officialdom. The student of Klingon is warned to check into the political situation of the Klingon Empire before trying to talk.

There is a native writing system for Klingon (called \{pIqaD\}) which seems to be well suited to the various dialects. This writing system is not yet well understood and is, therefore, not used in this dictionary. Instead, a transcription system based on the English alphabet has been devised. An article is being prepared for the <Klingon Encyclopedia> which will explain the details of \{pIqaD.\}

In the grammatical sketch portion of this dictionary, as a notational convention, Klingon will be written in boldface type, and English translations will be written in italics: \{tlhIngan\} <Klingon.>

The author would like to thank the Scientific Research Council for making funds available to carry out this research, as well as various members of the Federation Interlanguage[[p.12]] Institute who were quite helpful in criticizing earlier drafts of the dictionary. The author apologizes for any mistakes, and sincerely hopes that none of them leads to any unfortunate misunderstandings.

Finally, a great deal of credit must be given to the Klingon informant who provided all of the data upon which this dictionary is based. Although a prisoner of the Federation, he worked long, hard hours to make his knowledge available to citizens of the Federation. Maltz, we thank you.[[p.13]]

## 1. THE SOUNDS OF KLINGON

It is difficult to describe accurately the sounds of the Klingon language without using complex phonological and anatomical terminology. What follows, therefore, is intended to give only a guide to pronunciation. The best way to learn to pronounce Klingon with no trace of a Terran or other accent is to become friends with a group of Klingons and spend a great deal of time socializing with them. Very few non-Klingons speak Klingon without an accent.

The system of writing Klingon used in this dictionary has been developed so people who already know how to read English will have a minimum of difficulty approximating the sounds of Klingon words and sentences.

### 1.1. Consonants

\{b\} As in English <bronchitis> or <gazebo.> Some Klingons pronounce this sound as if it were $\{m\}$ and $\{b\}$ articulated almost simultaneously. Speakers of English can approximate
this sound by saying <imbalance> without the initial <i> sound. A very small number of Klingons pronounce $\{b\}$ as if it were $\{m$.
\{ch\} As in English <chew> or <artichoke.>
\{D\} This sound is close to English <d> in <dream> or <android,> but it is not quite the same. The English <d> sound is made by[[p.14]] touching the tip of the tongue to that part of the roof of the mouth just behind the upper teeth. Klingon \{D\} can best be approximated by English-speakers by touching the tip of the tongue to the roof of the mouth at a point about halfway between the teeth and the velum (or soft palate), that part of the roof of the mouth that is rather gooshy. As with Klingon $\{b$,$\} some speakers pronounce \{D\}$ as if it were more like <nd, $>$ and a distinct minority as if it were $\{n\}---b u t$, of course, with the tongue in the same position as for \{D.\}
\{gh\} This is not like anything in English. It can be produced by putting the tongue in the same position it would be in to say English <g> as in <gobble,> but relaxing the tongue somewhat and humming. It is the same as Klingon $\{\mathrm{H}\}$ (see below), but with the vocal cords vibrating at the same time.
\{H\} This is also not like anything in English, but it is just like <ch> in the name of the German composer <Bach> or in the

Yiddish toast <l'chaim,> or the <j> in the Mexican city of <Tijuana> in <Baja California.> It is produced in the same way as Klingon
\{gh,\} but is articulated with a very coarse, strong rasp. Unlike Klingon $\{g h$,$\} the vocal cords do not vibrate in saying Klingon$ \{H. \}
\{j\} As in English <junk; $>$ never ever as in French <jour.>
\{l\} As in English <lunge> or <alchemy.>
\{m\} As in English <mud> or <pneumatic.> Those few Klingons who pronounce \{b\} as $\{\mathrm{m}\}$ would say Klingon $\{\mathrm{baH}\}<$ fire (a torpedo)> and $\{m a H\}$ <we> the same way, and have to memorize which word is spelled which way.
\{n\} As in English <nectarine> or <sunspot.> Those Klingons who pronounce \{D\} more like \{n\} can easily articulate and hear the two sounds differently. Even a \{D\} that sounds like \{n\} is pronounced with the tongue in the Klingon $\{D\}$ position, not in the English <d> position. Klingon $\{n\}$ is produced with the tongue in the same position as English <d.>
\{ng\} As in English <furlong;> never as in English <engulf.> The <g> is never pronounced as a separate sound. This sound never occurs at the beginning of an English word, but it does come at the beginning of a number of Klingon words. English-[[keep hyphen]] speakers may practice making this sound at the beginning of a word by saying English <dang it!,> then saying it again without the <da.>
\{p\} As in English <parallax> or <opprobrium.> It is always[[p.15]] articulated with a strong puff or pop, never laxly. Speakers of English may want to exercise care to avoid discharging saliva while articulating this sound. It should be noted, however, that Klingons do not worry about this.
\{q\} Similar to English <k> in <kumquat, > but not quite that. The tongue position for English <k> is like that for Klingon \{gh\} and \{H.\} To produce Klingon $\{q$,$\} the main body of the tongue$ touches the roof of the mouth at a point farther back than it does for $\{g h\}$ or $\{H$.$\} Indeed, the tongue reaches for or touches$ the uvula (the meshy blob that dangles down from the back of the roof of the mouth), so articulating $\{q\}$ approximates the sound of choking. The sound is usually accompanied by a slight puff of air. English speakers are reminded that Klingon \{q\} is never pronounced <kw> as in the beginning of English <quagmire.>
\{Q\} This is like nothing particularly noteworthy in English. It is an overdone Klingon \{q.\} It is identical to \{q\} except that it is very guttural and raspy and strongly articulated, somewhat like a blend of Klingon $\{q\}$ and $\{\mathrm{H}$.
\{r\} This is not like the <r> in American English, but it does resemble the <r> in some dialects of British English, as well as the <r> in many languages of Europe. It is lightly trilled or rolled.
\{S\} This sound is halfway between English <s> and <sh,> as in <syringe> and <shuttlecock.> It is made with the tip of the tongue reaching toward that part of the roof of the mouth which it touches to produce Klingon \{D.\}
\{t\} As in English <tarpaulin> or <critique.> It differs from Klingon $\{D\}$ in two ways: (1) like $\{p$,$\} it is accompanied by a puff of air;$ and (2) the tongue touches a position on the roof of the mouth farther forward than that for \{D.\}
\{tlh\} This sound does not occur in English, but it is very much like the final sound in <tetl,> the Aztec word for <egg,> if properly pronounced. To produce this sound, the tip of the tongue touches the same part of the roof of the mouth it
touches for $\{t$,$\} the sides of the tongue are lowered away from$ the side upper teeth, and air is forced through the space on both sides between tongue and teeth. The sound is produced with a great deal of friction, and the warning given in the description of Klingon $\{p\}$ might be aptly repeated here.
\{v\} As in English vulgar or demonstrative.[[p.16]]
\{w\} Usually as in English <worrywart> or <cow.> On rare occasions, especially if the speaker is being rather deliberate, it is pronounced strongly, more like \{Hw\} or even \{Huw.\}
\{y\} As in English <yodel> or <joy.>
\{'\} The apostrophe indicates a sound which is frequently uttered, but not written, in English. It is a glottal stop, the slight catch in the throat between the two syllables of <uh-oh> or <unh-unh,> meaning '`no.'' When Klingon \{'\} comes at the end of a word, the vowel preceding the \{'\} is often repeated in a very soft whisper, as if an echo. Thus, Klingon \{je'\} <feed> almost sounds like \{je'e,\} where the articulation of the first \{e\} is abruptly cut off by the \{',\} and the second $\{e\}$ is a barely audible whisper. When \{'\} follows \{w\} or $\{y\}$ at the end of a word, there is often a whispered, echoed $\{u\}$ or $\{I$,$\} respectively. Occasionally$ the echo is quite audible, with a guttural sound like \{gh\} preceding the echoed vowel. For example, \{yIlI'\} <transmit it!> can sound more like \{yIlI'ghI.\} This extra-heavy echo is heard most often when the speaker is particularly excited or angry.

### 1.2. Vowels

There are five vowels in Klingon.
\{a\} As in English <psalm; $>$ never as in American English <crabapple.>
\{e\} As in English <sensor.>
\{I\} As English <i> in <misfit.> Once in a while, it is pronounced like <i> in <zucchini,> but this is very rare and it is not yet known exactly what circumstances account for it,
\{o\} As in English <mosaic.>
\{u\} As in English <gnu> or <prune;> never as in <but> or <cute.>
Note that when a vowel is followed by $\{w\}$ or $\{y$,$\} the$ combination of letters may not represent the same sound it does in English spelling:

KLINGON RHYMES WITH ENGLISH AS IN

| $\{$ aw $\}$ | <ow> | <cow> |
| :--- | :--- | :--- |
| $\{a y\}$ | <y> | <cry> |
| $\{e y\}$ | <ay> | <pay>[[p.17] $]$ |
| $\{I y\}$ | <ey> | <key> |
| $\{o y\}$ | <oy> | <toy> |

Klingon \{uy\} resembles <ooey> in English <gooey.> Klingon \{ew\} resembles nothing in English, but can be approximated by running Klingon \{e\} and \{u\} together. Likewise, Klingon \{Iw\} is \{I\} and $\{u\}$ run together. No words in Klingon have \{ow\} or \{uw.\} If they did, they would be indistinguishable from words ending in $\{0\}$ and $\{u$,$\} respectively.$

### 1.3. Stress

Each Klingon word of more than one syllable normally
contains one stressed (or accented) syllable. The stressed syllable is pronounced at a slightly higher pitch and with a little more force than the nonstressed syllable(s).

In a verb, the stressed syllable is usually the verb itself, as opposed to any prefix or suffix. If, however, a suffix ending with \{'\} is separated from the verb by at least one other suffix, both the verb and the suffix ending in \{'\} are stressed. In addition, if the meaning of any particular suffix is to be emphasized, the stress may shift to that syllable. Suffixes indicating negation or emphasis (section 4.3) are frequently stressed, as is the interrogative suffix (section 4.2.9).

In a noun, the stressed syllable is usually the syllable right before the first noun suffix, or the final syllable if there is no suffix. If, however, a syllable ending in $\{'\}$ is present, it is usually stressed instead. If there are two syllables in a row \{'\} both ending in \{',\} both are equally stressed.

Finally, it should be noted that there are some words which seem to have variable stress patterns, with the stress sometimes heard on one syllable and sometimes on another. This phenomenon is not yet understood. The rules given above do not account for this variability, but if they are followed, stress will wind up on acceptable syllables.

In the system used to transcribe Klingon in this dictionary, stress is not indicated.[[p.18]]

## 2. GRAMMATICAL SKETCH---INTRODUCTION

It is not possible, in a brief guide such as this, to describe the grammar of Klingon completely. What follows is only a
sketch or outline of Klingon grammar. Although a good many of the fine points are not covered, the sketch will allow the student of Klingon to figure out what a Klingon is saying and to respond in an intelligible, though somewhat brutish, manner. Most Klingons will never know the difference.

There are three basic parts of speech in Klingon: <noun,> <verb,> and <everything else.>[[p.19]]

## 3. NOUNS

There are various types of nouns in Klingon.

### 3.1. Simple nouns

Simple nouns, like simple nouns in English, are simple words;
for example, $\{D o S\}$ <target> or $\{Q I H\}$ <destruction.>

### 3.2. Complex nouns

Complex nouns, on the other hand, are made up of more than one part.

### 3.2.1. Compound nouns

```
Compound nouns consist of two or three nouns in a row,
much like English <earthworm> (<earth> plus <worm>) or <password>
(<pass> plus <word>). For example, {jolpa'} <transportroom> consists
of {jol} <transport beam> plus {pa'} <room.>
```

3.2.2. Verb plus -wI'
A second type of complex noun consists of a verb followed by
a suffix meaning one who does or thing which does. The
English suffix <-er> (as in <builder> ' one who builds'' or <toaster>
'`thing which toasts'') is a rough equivalent. In Klingon, the[[p.20]]
suffix is \{-wI'.\} It occurs, for example, in \{baHwI'\} <gunner,> which
consists of the verb \{baH\} <fire (a torpedo)> plus \{-wI'\} <one who
does.> Thus, \{baHwI'\} is literally ' one who fires [a torpedo].''
Similarly, \{So'wI'\} <cloaking device> comes from the verb \{So'\}
<cloak> plus \{-wI'\} <thing which does.> \{So'wI'\} is a "'thing which
cloaks.''

A noun formed by adding $\{-w I '\}$ to $a$ verb is a regular noun, so it may be used along with another noun to form a compound noun. For example, \{tIjwI'ghom\} <boarding party> comes from \{tIjwI'\} <boarder> plus \{ghom\} <group; ${ }^{\text {c }}$ and \{tIjwI'\} comes from \{tIj\} <board> plus \{-wI'.\}

### 3.2.3. Other complex nouns

There are a good many nouns in Klingon which are two or, less frequently, three syllables long, but which are not complex nouns of the types described above. These nouns probably at one time were formed by combining simple nouns, but one or all of the nouns forming the complex noun are no longer in use, so it is not possible (without extensive etymological research) to know what the individual pieces mean.

For example, \{'ejDo'\} means <starship.> The syllable \{'ej\} also occurs in \{'ejyo'\} <Starfleet.> There are, however, no known Klingon words \{'ej, Do',\} or \{yo'\} that have anything to do with Starfleet, starships, the Federation, or space vehicles of any kind. It is quite likely that \{Do'\} is an Old Klingon word for space vessel (the modern Klingon word is \{Duj\}) that is used nowhere except in the noun \{'ejDo'.\} Of course, without further study, that remains pure conjecture.

### 3.3. Suffixes

All nouns, whether simple or complex, may be followed by one or more suffixes. If there are two or more suffixes, the suffixes must occur in a specific order. Suffixes may be classified on the basis of their relative order after the noun. There are five types of suffixes (which, for convenience, will be numbered 1 through 5). Suffixes of Type 1 come right after the noun; suffixes of Type 2 come after those of Type 1; suffixes of Type 5 come last. This may be illustrated as follows: [[p.21]]

```
NOUN--1--2--3--4--5
```

Of course, if no suffix of Type 1 is used but a suffix of Type 2 is used, the Type 2 suffix comes right after the noun. If a suffix of Type 5 is the only suffix used, it comes right after the noun. Only when two or more suffixes are used does their order become apparent.

There are at least two suffixes in each suffix type. Only one suffix of each type may be used at a time. That is, a noun cannot be followed by, for example, two or three Type 4 suffixes.

The members of each suffix type are as follows.
3.3.1. Type 1: Augmentative/diminutive
\{-'a'\} augmentative
This suffix indicates that what the noun refers to is bigger, more important, or more powerful than it would be without the suffix.
\{SuS\} <wind, breeze> \{SuS'a'\} <strong wind> \{Qagh\} <mistake> \{Qagh'a'\} <major blunder> \{woQ\} <power> \{woQ'a'\} <ultimate power>
\{-Hom\} diminutive
This is the opposite of the augmentative suffix. It indicates that what the noun refers to is smaller, less important, or less powerful than it would be without the suffix.

```
{SuS} <wind, breeze> {SuSHom} <wisp of air>
{roj} <peace> {rojHom} <truce, temporary peace>
```

### 3.3.2. Type 2: Number

As in English, a singular noun in Klingon has no specific suffix indicating that it is singular: \{nuH\} <weapon> refers to a single weapon of any type. Unlike English, however, the lack of a specific suffix for plural does not always indicate that the noun is singular. In Klingon, a noun without a plural suffix may still refer to more than one entity The. plurality is indicated by a[[p.22]] pronoun, whether a verb prefix (see section 4.1) or a full word (section 5.1), or by context. For example, \{yaS\} officer may refer to a single officer or to a group of officers, depending on other words in the sentence or the context of the discussion.

Compare:
\{yaS vImojpu'\} <I became an officer.>
\{yaS DImojpu'\} <We became officers.>
\{yaS jIH\} <I am an officer.>
\{yaS maH\} <We are officers.>
In the first pair of sentences, the only difference is the verb prefix (here only partially described; see section 4.1): \{vI-\} <I,> \{DI-\} <we.> In the second pair, the pronouns are different: \{jIH\}<I,> \{maH\} <we.>

Under certain circumstances, the only way to know wheth-
er the noun refers to one or more than one entity is by context. Thus, \{yas mojpu'\} can be translated either <he/she became an officer> or <they became officers.> Those taking part in any discussion in which this sentence is used would presumably already know whom is being talked about, so they would also know whether he or she or they is the correct meaning.

Fortunately for students of Klingon, it is never incorrect to add a plural suffix to a noun referring to more than one entity, even in those cases where it is unnecessary to do so. Accordingly, both \{yaS maH\} and \{yaSpu' maH\} are correct, both meaning <we are officers> (\{-pu'\} is a plural suffix). On the other hand, a plural suffix cannot be added to a noun referring to only one thing, even if pronouns are present in the sentence. In Klingon, \{yaSpu' jIH\} <I am officers> is as incorrect as its English translation.

There are three different plural suffixes in Klingon.
\{-pu'\} <plural for beings capable of using language>
This suffix can be used to indicate plurality for Klingons, Terrans, Romulans, Vulcans, and so on, but not for lower animals of any kind, plants, inanimate objects, electromagnetic or other beams or waves, etc.[[p.23]]
\{yaS\} <officer> \{yaSpu'\} <officers>
\{Duy\} <emissary> \{Duypu'\} <emissaries>
\{-Du'\} <plural for body parts>
This suffix is used when referring to body parts of those beings capable of using language as well as of any other animal.

```
{qam} <foot> {qamDu'} <feet>
{tlhon} <nostril> {tlhonDu'} <nostrils>
```

\{-mey\} <plural, general usage>
This suffix is used to mark the plural of any noun.
\{mID\} <colony> \{mIDmey\} <colonies>
\{yuQ\} <planet> \{yuQmey\} <planets>
It can also be used with nouns referring to beings capable of using language (those nouns which take \{-pu'\}). When it is so used, it adds a notion of ''scattered all about'' to the meaning. Compare:

```
{puq} <child>
{puqpu'} <children>
{puqmey} <children all over the place>
```

The suffix $\{-m e y\} ~ c a n n o t ~ b e ~ u s e d ~ w i t h ~ b o d y ~ p a r t s . ~ I t ~ s h o u l d ~$ be noted, however, that Klingon poets often violate this grammatical rule in order to evoke particular moods in their poetry. Thus, forms such as \{tlhonmey\} <nostrils scattered all about> do occur. Until the subtle nuances of such constructions are firmly grasped, however, it is suggested that students of Klingon stick to the rules.

Finally, some nouns in Klingon are inherently or always plural in meaning, and therefore never take plural suffixes.
\{ray'\} <targets>[[p.24]]
\{cha\} <torpedoes>
\{chuyDaH\} <thrusters>
The singular counterparts of such words are utterly distinct:
\{DOS \} <target>
\{peng\} <torpedo>
\{vIj\} <thruster>
The singular forms may take the $\{-m e y\}$ suffix, but the meaning always carries the ''scattered all about'' connotation:
\{DoSmey\} <targets scattered all about>
\{pengmey\} <torpedoes all over the place>
Inherently plural nouns are treated grammatically as singular nouns in that singular pronouns are used to refer to them (sections 4.1, 5.1). For example, in the sentence \{cha yIghuS\} <Stand by torpedoes!> or <Get the torpedoes ready to be fired!> the verb prefix \{yI-,\} an imperative prefix used for singular objects, must be used even though the object (\{cha\} <torpedoes>) has a plural meaning.

### 3.3.3. Type 3: Qualification

Suffixes of this type indicate the speaker's attitude toward the noun, or how sure the speaker is that the noun is being used appropriately.
\{-qoq\} <so-called>
This suffix indicates that the noun is being used in a false or ironic fashion. Saying \{rojqoq\} <so-called peace,> rather than simply \{roj\} <peace,> indicates that the speaker does not really believe that peace is legitimate or likely to endure.
\{-Hey\} <apparent>
This suffix indicates that the speaker is pretty sure the object referred to by the noun is accurately described by the noun, but has some doubts. For example, if the scanner on a Klingon ship senses an object, and the officer reporting the presence of this object assumes, but is not yet sure, that the object is a vessel, he will probably refer to the object as \{DujHey\} <an apparent vessel,> rather than simply \{Duj\} <vessel.> [ [p.25]]
\{-na'\} <definite>
This is the counterpart of \{-Hey.\} It indicates that there is no doubt in the speaker's mind as to the accuracy of his or her choice of words. Once the Klingon officer referred to above is sure that the object the scanner has found is a vessel, he might

vessel.>

### 3.3.4. Type 4: Possession/specification

Type 4 is the largest class of noun suffixes. It consists of all the possessive suffixes, plus suffixes which can be translated as
English <this> and <that.>
The possessive suffixes are:

```
{-wIj} <my> {-maj} <our>
{-lIj} <your> {-raj} <your (plural)>
{-Daj} <his, her, its> {-chaj} <their>
```

Thus, \{juH\} <home> occurs in \{juHwIj\} <my home,> \{juHlIj\} <your home,> \{juHchaj\} <their home,> etc.

When the noun being possessed refers to a being capable of using language, a special set of suffixes is used for first- and second-person possessors:

```
{-wI'} <my> {-ma'} <our>
{-lI'} <your> {-ra'} <your (plural)>
```

These suffixes occur in, for example, \{joHwI'\} <my lord> and \{puqlI'\} <your child.> It is grammatically correct to use the regular possessive suffixes with nouns referring to beings capable of speech (as in \{puqlij\} <your child>), but such constructions are considered derogatory; \{joHwIj\} for <my lord> borders on the taboo. Students of Klingon should bear this in mind.

To indicate that one noun is the possessor of another noun (e.g., <enemy's weapon>), no suffix is used. Instead, the two nouns are said in the order possessor-possessed: \{jagh nuH\} <enemy's weapon> (literally, <enemy weapon>). This construction is also used for phrases translated by <of the> in English, such as <weapon of the enemy.> (See also section 3.4.) [[p.26]]

There are two suffixes indicating how close to the speaker the object referred to by the noun is.
\{-vam\} <this>
Like its English translation, this suffix indicates that the noun refers to an object which is nearby or which is the topic of the conversation.

```
{nuHvam} <this weapon (near me as I speak)>
{yuQvam} <this planet (that we've been talking about)>
```

When used with a plural noun (one with a plural suffix or an inherently plural noun), \{-vam\} is translated <these.>
\{nuHmeyvam\} <these weapons>

## \{-vetlh\} <that>

This suffix indicates that the noun refers to an object which is not nearby or which is being brought up again as the topic of conversation.

```
{nuHvetlh} <that weapon (over there)>
{yuQvetlh} <that planet (as opposed to the one we were just
    talking about)>
When used with a plural noun, {-vetlh} is translated <those:>
{nuHmeyvetlh} <those weapons>
```

There is no Klingon equivalent for English <a, an, the.> In translating from Klingon to English, one must use context as a guide to when to use <a> or <an> and when <the.> In this book, <a> or <an> and <the> are used in translations to make the English sound more natural.

### 3.3.5. Type 5: Syntactic markers

These suffixes indicate something about the function of the noun in the sentence. As in English, subjects and objects are normally indicated by the position of the noun or nouns in the sentence. The following two English sentences have the same words, but the sentences have different meanings due to the order of the words:
<Dogs chase cats.>
<Cats chase dogs.>[[p.27]]
Subjects and objects in Klingon are likewise indicated by word order. This is described in section 6.1.

In other instances, English indicates the function of nouns in a sentence by adding words, particularly prepositions. In the following English sentence, the word <around> before <canaries> indicates that the canaries are neither chasing nor being chased:
<Dogs chase cats around canaries.>
Similarly, in Klingon, nouns which indicate something other than subject or object usually must have some special indication of exactly what their function is. Unlike English, this is accomplished by using suffixes.
\{-Daq\} <locative>
This suffix indicates that something is happening (or has happened or will happen) in the vicinity of the noun to which it is attached. It is normally translated by an English preposition: <to, in, at, on.> The exact translation is determined by the meaning of the whole sentence. For example, \{pa'Daq\} is \{pa'\} <room> plus the suffix \{-Daq.\} It may occur in sentences such as the following:
\{pa'Daq jIHtaH\} <I'm in the room.>
\{pa'Daq yIjaH\} <Go to the room.>
In the first sentence, $\{j I H\}<I>$ is used in the sense of <I am> (see section 6.3), so <in> is the most reasonable translation of \{-Daq.\} In the second sentence, the verb is $\{j a H\}<g o,>$ so <to> makes the most sense as a translation of \{-Daq.\} An English preposition
need not be part of the translation. Klingon \{Dung\} means <area above,> and \{DungDaq\} is <overhead,> literally something like ` ${ }^{\text {at }}$ the area above.'' For further discussion on prepositional concepts, see section 3.4.

It is worth noting at this point that the concepts expressed by the English adverbs <here, there,> and <everywhere> are expressed by nouns in Klingon: \{naDev\} <hereabouts,> \{pa'\} <thereabouts,> \{Dat\} <everywhere.> These words may perhaps be translated more literally as '`area around here,'' '`area over there,'' and '`all places,'' respectively. Unlike other nouns, these three words are never followed by the locative suffix. (Note[[p.28]] that \{pa'\} <thereabouts> and \{pa'\} <room> are identical in sound; \{pa'Daq,\} however, can mean only <in/to the room.>)

There are a few verbs whose meanings include locative notions, such as \{ghos\} <approach, proceed.> The locative suffix need not be used on nouns which are the objects of such verbs.

```
{Duj ghoStaH} <It is approaching the ship.>
    ({Duj} <ship, vessel,> {ghoStaH} <it is
    approaching it>)
```

\{yuQ wIghoStaH\} <We are proceeding toward the planet.> (\{yuQ\} <planet,> \{vIghoStaH\} <we are proceeding toward it>)

If the locative suffix is used with such verbs, the resulting sentence is somewhat redundant, but not out-and-out wrong.
\{DujDaq ghostaH\} <It is approaching toward the ship.>
\{-vo'\} <from>
This suffix is similar to \{-Daq\} but is used only when action is in a direction away from the noun suffixed with \{-vo'.\}
\{pa'vo' yIjaH\} <Leave the room!>
A more literal translation of this sentence might be '` Go from the room.'' \{-mo'\} <due to, because of> This suffix occurs in sentences such as: \{SuSmo' joqtaH\} <It is fluttering in the breeze.> The noun \(\{\) SuSmo'\} means <due to the breeze,> so the whole sentence is literally '`due to the breeze, it [a flag] is fluttering.''
\{-vaD\} <for, intended for>
This suffix indicates that the noun to which it is attached is in some way the beneficiary of the action, the person or thing for whom or for which the activity occurs.
\{Qu'vaD lI' De'vam\} <This information is useful for the mission.>[[p.29]]

The noun \{Qu'vaD\} means <for the mission,> and in this sentence \{-vaD\} indicates that the information is intended to be used somehow for the mission under discussion.
\{-'e'\} <topic>
This suffix emphasizes that the noun to which it is attached is the topic of the sentence. In English, this is frequently accomplished by stressing the noun (saying it emphatically) or by special syntactic constructions.

```
{lujpu' jIH'e'} <I, and only I, have failed.>[[lujpu'=>jIlujpu']]
    <It is I who has failed.>
{De''e' vItlhapnISpu'} <I needed to get the INFORMATION.>
                        <It was the information (and not
                        something else) that I needed.>
```

Without the \{'e',\} these same sentences would have no noun[['e'=>-'e']] singled out for emphasis:

```
{lujpu' jIH} <I have failed.>[[lujpu'=>jIlujpu']]
```

\{De'vItlhapnISpu'\} <I needed to get the information.>

For a further use of $\left\{-' e^{\prime},\right\}$ see section 6.3.

### 3.3.6. Relative ordering of the suffixes

As briefly illustrated in the discussion of \{-vam\} <this> and \{-vetlh\} <that> (section 3.3.4), when a noun is followed by more than one suffix, the suffixes must occur in the proper order, according to the classification just described. It is rare for a noun to be followed by five suffixes, but it does happen from time to time. Some examples of nouns with two or more suffixes follow. (Suffix types are indicated by numbers.)
\{QaghHommeyHeylIjmo'\} <due to your apparent minor errors> \{Qagh\} (noun) <error> \{-Hom\} (1) <diminutive> \{-mey\} (2) <plural>
\{-Hey\} (3) <apparent>
\{-lIj\} (4) <your>
\{-mo'\} (5) <due to>
\{pa'wIjDaq\} <in my quarters>
\{pa'\} (noun) <room>[[p.30]]
\{-wIj\} (4) <my>
\{-Daq\} (5) <locative>
\{Duypu'qoqchaj\} <their so-called emissaries>
\{Duy\} (noun) <emissary>
\{-pu'\} (2) <plural>
\{-qoq\} (3) <so-called>
\{-chaj\} (4) <their>
\{qamDu'wIjDaq\} <at my feet>
\{qam\} (noun) <foot>
\{-Du'\} (2) <plural>
\{-wIj\} (4) <my>

```
    {-Daq} (5) <locative>
{rojHom'e'} <the truce> (as topic)
    {roj} (noun) <peace>
    {-Hom} (1) <diminutive>
    {-'e'} (5) <topic>
All examples of suffixes given so far show only simple nouns. Suffixes are attached to complex nouns (section 3.2) in exactly the same fashion.
```

```
{DIvI'may'DujmeyDaq} <at/to the Federation battle cruisers>
```

{DIvI'may'DujmeyDaq} <at/to the Federation battle cruisers>
{DIvI'may'Duj} (noun) <Federation battlecruiser>
{DIvI'may'Duj} (noun) <Federation battlecruiser>
{-mey} (2) <plural>
{-mey} (2) <plural>
{-Daq} (5) <locative>

```
    {-Daq} (5) <locative>
```

```
{baHwI'pu'vam} <these gunners>
```

{baHwI'pu'vam} <these gunners>
{baHwI'} (noun) <gunner>
{baHwI'} (noun) <gunner>
{-pu'} (2) <plural>
{-pu'} (2) <plural>
{-vam} (4) <this>

```
    {-vam} (4) <this>
```

3.4. The noun-noun construction

Some combinations of two (or more) nouns in a row are so common as to have become everyday words. These are the compound nouns (as discussed in section 3.2.1). In addition, it is possible to combine nouns in the manner of a compound noun to produce a new construct even if it is not a legitimate compound noun (``legitimate'' in the sense that it would be found in a dictionary).

The translation of two nouns combined in this way, say[[p.31]]
N1-N2 (that is, noun \#1 followed by noun \#2), would be <N2
of the N1.> For example, \{nuH\} <weapon> and \{pegh\} <secret> combine to form \{nuH pegh\} <secret of the weapon.> An alternate translation would be <N1's N2,> in this case, <the weapon's secret.> As discussed in section 3.3.4, this is the Klingon possessive construction for a noun possessed by another noun.

When the noun-noun construction is used, only the second noun can take syntactic suffixes (Type 5). Both nouns, however, may take suffixes of the other four types. For example:

```
{nuHvam pegh} <secret of this weapon>
    {nuH} (noun) <weapon>
    {-vam} (4) <this>
    {pegh} (noun) <secret>
{jaghpu' yuQmeyDaq} <at/to the enemies' planets>
    {jagh} (noun) <enemy>
    {-pu'} (2) <plural>
    {yuQ} (noun) <planet>
    {-mey} (2) <plural>
    {-Daq} (5) <locative>
{puqwI' qamDu'} <my child's feet>
    {puq} (noun) <child>
    {-wI'} (4) <my>
    {qam} (noun) <foot>
    {-Du} (2) <plural>
```

English prepositional phrases are also rendered in Klingon by this noun-noun construction. Prepositional concepts such as above and below are actually nouns in Klingon, best translated as '`area above,'' '`area below,'' etc. The locative suffix (section 3.3.5) follows the second noun. For example:
$\begin{array}{cll} \begin{cases}\text { nagh DungDaq\} }\end{cases} & \text { <above the rock> } \\ \text { \{nagh \} } & \text { (noun) } & \text { <rock> } \\ \text { \{Dung\} } & \text { (noun) } & \text { <area above> } \\ \text { \{-Daq\} } & \text { (5) } & \text { <locative> }\end{array}$
More literally, this is '`at the area above the rock'' or '`at the rock's above-area.''[[p.32]]

## 4. VERBS

Klingon verbs are mostly monosyllabic forms which may be accompanied by several affixes. As with Klingon nouns, Klingon verbs may take suffixes falling into a number of types based on their relative position following the verb. There are nine types of verb suffixes. Unlike Klingon nouns, Klingon verbs may take prefixes. Thus, if suffix types are indicated as numbers, the structure of a Klingon verb is:

PREFIX--VERB--1--2--3--4--5--6--7--8--9

### 4.1. Pronominal prefixes

Each Klingon verb begins with a single prefix that indicates who or what is performing the action described by the verb and, when relevant, who or what is the recipient of that action. In other words, Klingon verb prefixes indicate both the subject and the object of the sentence.

### 4.1.1. Basic prefixes

The basic set of prefixes can be presented in a chart. (In order to make the chart as clear as possible, some prefixes are repeated.)

Note that both the subject and the object are combined[[p.33]]

| OBJECT | none | <me> | <you> | $\begin{gathered} \text { <him/> } \\ \text { <her/it> } \end{gathered}$ | <us> | <you> <br> <(plural) | $\begin{aligned} & \text { <them> } \\ & > \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SUBJECT |  |  |  |  |  |  |  |
| <I> | \{jI-\} | -- | \{qa-\} | \{vI-\} | -- | \{Sa- \} | \{vI- \} |
| <you> | \{bI- \} | \{cho-\} | -- | \{Da-\} | \{ju-\} | -- | \{Da- \} |
| <he/she/it> | 0 | \{mu- \} | \{Du- \} | 0 | \{ nu- \} | \{lI-\} | 0 |
| <we> | \{ma- \} | -- | \{pI-\} | \{wI- \} | -- | \{re-\} | \{DI- \} |
| <you (plural)> | \{Su- \} | \{tu- \} | -- | \{ bo- \} | \{ che- \} | \} -- | \{bo- \} |
| <they> | 0 | \{mu- \} | \{nI-\} | \{lu-\} | \{ nu- \} | \{lI-\} | 0 |

into a single prefix. 0 in the chart means that the particular subject-object combinations are indicated by the absence of a prefix before the verb; -- in the chart notes subject-object combinations which cannot be expressed with the Klingon verb prefix system. For such meanings, suffixes (section 4.2.1) and/or pronouns (section 5.1) must be used.

The prefixes in the first column of the chart (headed ''none'') are used when there is no object; that is, when the action of the verb affects only the subject (the '`doer''). The verb \{Qong\} <sleep> occurs with the pronominal prefixes as follows:

```
{jIQong} <I sleep>
{bIQong} <you sleep>
{Qong} <he/she/it sleeps, they sleep>
{maQong} <we sleep>
{SuQong} <you (plural) sleep>
```

 subject would be indicated elsewhere in the sentence or by context.

This set of prefixes is also used when an object is possible, but unknown or vague. Thus, \{jIyaj\} <I understand> can be used[[p.34]] when the speaker understands things in general, knows what is going on, or understands what another speaker has just said. It cannot, however, be used for understanding a language or understanding a person. Similarly, \{maSop\} <we eat> can be used to indicate a general act of eating, but not if a specific food is mentioned.

The remaining prefixes combine subject and object. Some of them are illustrated below, using the verb \{legh\} <see.>

| \{qalegh\} <I see you> | \{cholegh\} <you see me> |
| :---: | :---: |
| ```{vIlegh} <I see him/her/it/ them>``` | \{mulegh\} <he/she/it sees me,> <br> <they see me> |
| \{Salegh\} <I see you (plural)> | \{tulegh\} <you (plural) see me> |
| \{Dalegh\} <you see him/her/ it/them> | \{Dulegh\} <he/she/it sees you> |
| \{julegh\} <you see us> | \{pIlegh\} <we see you> |
| \{legh\} <he/she/it sees him/her/it/them,> <they see them> | \{lulegh\} <they see him/her/it> |

4.1.2 Imperative prefixes[[4.1.2=>4.1.2.]]

A special set of prefixes is used for imperatives, that is, verbs giving commands. Commands can be given only to <you> or <you (plural).>

| OBJECT | none | <me> | <him/her/it> | <us> | <them> |
| :---: | :---: | :---: | :---: | :---: | :---: |
| <you> | \{yI- \} | \{ HI- \} | \{yI-\} | \{ gho- \} | \{tI- \} |
| <you (plural)> | \{pe-\} | \{ HI- \} | \{yI-\} | \{ gho-\} | \{tI-\} |

Note that, with one exception, the identical prefix is used regardless of whether the command is being given to one or
more than one person. The single exception is when a command is given but there is no object. In such cases, a special prefix \{pe-\} is used to give a command to several people. Examples of the imperative prefixes follow. Exclamation points in the translation indicate that it is a command.

```
{yIQong} <sleep!> {peQong} <(you plural) sleep!>
{HIqIp} <hit me!> {ghoqIp} <hit us!>[[p.35]]
{yIqIp} <hit him/her/it!> {tIqIp} <hit them!>
```

To indicate action directed against oneself in an imperative verb (e.g., <tell yourself>), the suffix \{-egh\} <oneself> is used along [ [-egh=>-'egh] ]
with $\{y I-\}$ or $\{p e-\}$ (see section 4.2.1).

### 4.1.3 Notational conventions[[4.1.3=>4.1.3.]]

As a notational convention, prefixes indicating subject and
object will be translated as <subject--object;> e.g., \{qa-\} <I--you,>
\{pI-\} <we--them.> Imperative prefixes will be translated similarly,
preceded by the word [imperative:](imperative:) \{tI-\} <imperative: you--them.>
Also, prefixes which can refer to male, female, inanimate,
singular, and/or plural (e.g., \{vI-\} <I--him/her/it/them>) will be
translated correctly, but usually without giving all the options
(e.g., <I--him/her>). This convention will also be used when
translating verbs containing these prefixes; e.g., \{vIlegh\} <I see
him/her.>
4.2. Verb suffixes
There are nine types of verb suffixes.
4.2.1. Type 1: Oneself/one another
\{-egh\} <oneself>[[-egh=>-'egh]]
This suffix is used to indicate that the action described by the verb affects the performer of the action, the subject. It is translated by English <self.> When this suffix is used, the prefix set indicating '`no object'' must also be used.

```
    {jIqIp'egh} <I hit myself> ({qIp} <hit>)
```

    \{bIqIp'egh\} <you hit yourself>
    \{qIp'egh\} <he/she hits himself/herself>
    It is also possible to use this suffix with imperative verbs. As with nonimperatives, the prefix indicating ' no object'' must be used.

```
        {yIja''egh} <tell yourself!> ({ja'} <tell>)
```

        \{peja''egh\} <tell yourselves!>[[p.36]]
    \{-chuq\} <one another>
This suffix is used only with plural subjects. It is translated

```
<each other> or <one another.> The prefix set indicating ``no
object'' is also used when this suffix is used.
{maqIpchuq} <we hit each other> ({qIp} <hit>)
{SuqIpchuq} <you (plural) hit each other>
{qIpchuq} <they hit each other>
{peqIpchuq} <hit each other!>
```

### 4.2.2. Type 2: Volition/predisposition

Suffixes of this type express how much choice the subject has about the action described or how predisposed the subject is to doing it.

```
{-nIS} <need>
```

    \{vIleghnIS\} <I need to see him/her> (\{legh\} <see>)
    \{bISopnIS\} <you need to eat> (\{Sop\} <eat>)
    \{-qang\} <willing>
\{Heghqang\} <he/she is willing to die> (\{Hegh\} <die>)
\{qaja'qang\} <I am willing to tell you> (\{ja'\} <tell>)
\{-rup\} <ready, prepared> (referring to beings)
\{Heghrup\} <he/she is ready to die> (\{Hegh\} <die>)
\{qaleghrup\} <I am ready to see you> (\{legh\} <see>)
\{nuja'rup\} <they are prepared to tell us> (\{ja'\} <tell>)
\{-beH\} <ready, set up> (referring to devices)
\{pojbeH\} <(the device) is set up to analyze it> (\{poj\} <analyze>)
\{labbeH\} <(the device) is ready to transmit data> (\{lab\}
<transmit data>)

There is, it should be noted, a verb \{ghuS\} which means <to be prepared to launch or project (something).> This verb never takes the suffix \{-rup.\} It is used primarily in reference to torpedoes---so much so that if the object is not specifically[[p.37]] stated, and context does not dictate otherwise, it is always assumed to be <torpedoes.> Accordingly, both of the following sentences mean <Be prepared to launch torpedoes!> or <Stand by on torpedoes!>
\{cha yIghuS \} (\{cha\} <torpedoes>)
\{yIghuS \}
The verb \{ghuS\} can also be used in reference to, among other things, rockets, missiles, and various kinds of energy beams (which, like torpedoes, go from one point to another). It is also used to describe the action of pulling back the elastic band of a slingshot. In most other instances of preparedness, however, \{-rup\} is required.

```
{-vIp} <afraid>
    {choHoHvIp} <you are afraid to kill me> ({HoH} <kill>)
    {muqIpvIp} <they are afraid to hit us> ({qIp} <hit>)
```

This suffix is rarely used with a prefix meaning <I> or <we.> Though it is grammatically correct, it is culturally taboo.

### 4.2.3. Type 3: Change

Suffixes of this type indicate that the action described by the verb involves a change of some kind from the state of affairs that existed before the action took place.
\{-choH\} <change in state, change in direction>
\{maDo'choH\} <we are becoming lucky, we are undergoing a turn of luck> (\{Do'\} <be lucky>)
\{ghoSchoH\} <he/she is beginning to go (somewhere)> ( $\{$ ghoS $\}<g o>$ )

The implication of the second example is that he or she was going either nowhere or somewhere else sometime before the phrase was uttered. Note that the translation of this suffix may be English <become> or <begin to.>
\{-qa'\} <resume>
Using this suffix implies that an action had been taking place, then it stopped, and then it began again.
\{vInejqa'\} <I am resuming the search, I am searching for[[p.38]] him/her again> (\{nej\} <search>)
4.2.4. Type 4: Cause
\{-moH\} <cause>
Adding this suffix to a verb indicates that the subject is causing a change of condition or causing a new condition to come into existence.
\{tIjwI'ghom vIchenmoH\} <I form a boarding party> (\{tIjwI'ghom\} <boarding party,> \{chen\} <take form, take shape>)

This sentence might also be translated <I cause a boarding party to be formed.>
\{HIQOymoH\} <let me hear (something)> (\{QOy\} <hear>)
More revealingly, this sentence could be translated <cause me to hear (something).> Note that this sentence would not be used in asking permission to hear; it is a direct command.

Normally, the best English translation of a verb with \{-moH\} does not contain the word <cause.> For example, \{chenmoH\} <he/she makes, creates> could be translated <he/she causes to take shape> (\{chen\} <take form, take shape>), but this is an awkward English phrase.

### 4.2.5. Type 5: Indefinite subject/ability

The two suffixes of Type 5 have nothing much to do with each other except for both being Type 5. As a result, no verb occurs with both of these suffixes at the same time.

## \{-lu'\} <indefinite subject>

This suffix is used to indicate that the subject is unknown, indefinite, and/or general. Since the subject is always the same (that is, it is always unstated), the pronominal prefixes (section 4.1.1) are used in a different way. Those prefixes which normally indicate first- or second-person subject and[[p.39]] third-person singular object (\{vI-, Da-, wI-, bo-\}) are used to indicate first- or second-person object. Thus, \{vI-,\} which normally means <I do something to him/her,> when in a verb with \{-lu'\} means <someone/something does something to me.> Similarly, the prefix \{lu-,\} which normally means <they do something to him/her,> becomes <someone/something does something to them.>
\{Daqawlu'\} <someone/something remembers you>
(\{qaw\} <remember>)
\{wIleghlu'\} <someone/something sees us> (\{legh\} <see>) \{Soplu'\} <someone/something eats it> (\{Sop\} <eat>)

Verbs with \{-lu'\} are often translated into the English passive voice.

```
{Daqawlu'} <you are remembered>
{wIleghlu'} <we are seen>
{Soplu'} <it is eaten>
```

When used with the verb \{tu'\} <find, observe> and a third-[ [keep hyphen] ]
person singular subject pronoun (0), the resulting verb form \{tu'lu'\} <someone/something finds it> is often translated by English <there is.>
\{naDev puqpu' tu'lu'\} <there are children around here, someone/something finds children here> (\{naDev\} <hereabouts,> \{puqpu'\} <children>)
\{-laH\} <can, able>
\{jIQonglaH\} <I can sleep> (\{Qong\} <sleep>)
\{choleghlaH\} <you can see me> (\{legh\} <see>) \{nuQaw'laH\} <he/she can destroy us> (\{Qaw'\} <destroy>)
4.2.6. Type 6: Qualification

Type 3 noun suffixes, these suffixes show how sure the speaker is about what is being said.[[p.40]]

```
{-chu'} <clearly, perfectly>
    {jIyajchu'} <I understand clearly> ({yaj} <understand>)
    {baHchu'} <he/she fired (the torpedo) perfectly> ({baH} <fire [a
        torpedo]>)
```

```
{-bej} <certainly, undoubtedly>
    {chImbej} <it is undoubtedly empty> ({chIm} <be empty>)
    {nuSeHbej} <he/she is certainly controlling us> ({SeH} <con-
                        trol>)
{-law'} <seemingly, apparently>
    {chImlaw'} <it appears to be empty> ({chIm} <be empty>)
    {nuSeHlaw'} <he/she seems to be controlling us> ({SeH} <con-
                trol>)
This suffix expresses any uncertainty on the speaker's part and may even be thought of as meaning <I think> or <I suspect.> Thus, the previous two sentences could be translated <I think it's empty, I suspect that he/she is controlling us.>
```

4.2.7. Type 7: Aspect

Klingon does not express tenses (past, present, future). These ideas come across from context or other words in the sentence (such as \{wa'leS\} <tomorrow>). The language does, however, indicate aspect: whether an action is completed or not yet completed, and whether an action is a single event or a continuing one.

The absence of a Type 7 suffix usually means that the action is not completed and is not continuous (that is, it is not one of the things indicated by the Type 7 suffixes). Verbs with no Type 7 suffix are translated by the English simple present tense.

```
{Dalegh} <you see him/her> ({legh} <see>)
{qaja'} <I tell you> ({ja'} <tell>)
```

When the context is appropriate, verbs without a Type 7 suffix may be translated by the English future tense (<will>), but the real feeling of the Klingon is closer to English sentences such as <We fly tomorrow at dawn,> where the present-tense verb refers to an event in the future.[[p.41]]
\{-pu'\} <perfective>
This suffix indicates that an action is completed. It is often translated by the English present perfect (<have done something>).

```
{Daleghpu'} <you have seen it> ({legh} <see>)
{vIneHpu'} <I wanted them> ({neH} <want>)
{qaja'pu'} <I told you> ({ja'} <tell>)
```

\{-ta'\} <accomplished, done>
This suffix is similar to \{-pu',\} but it is used when an activity was deliberately undertaken, the implication being that someone set out to do something and in fact did it. English translations seldom reveal the distinction.

```
{vISuqta'} <I have acquired it> ({Suq} <get, acquire>)
```

\{luHoHta'\} <they have killed him/her> (\{HoH\} <kill>)
The second sentence above could not be used if the killing were the result of a general attack not intended to kill a specific person or if the killing were an accident. In such cases, \{-pu'\} would be used:
\{luHoHpu'\} <they have killed him/her>
The meaning of $\left\{-t a^{\prime}\right\}$ can also be indicated syntactically. That is, instead of using the suffix \{-ta',\} a special verbal construction can follow the verb which indicates the accomplished action. This special verb is \{rIn\} <be finished, accomplished,> and in this usage it always takes the suffix \{-taH\} <continuous> (see below) and the third-person pronominal prefix (0). The resulting construction, \{rIntaH,\} literally means <it continues to be finished> or <it remains accomplished.> It is used to indicate that the action denoted by the preceding verb is a fait accompli: it is done, and it cannot be undone.
\{luHoH rIntaH\} <they have killed him/her> (\{HoH\} <kill>)
\{vIje' rIntaH\} <I have purchased it> (\{je'\} <purchase>)
The English translations of \{rIntaH\} and \{-ta'\} are usually the same. The notion of absolute finality implied by \{rIntaH\} seldom comes across.

It should be noted that $\{r \operatorname{IntaH}\}$ is sometimes used for[[p.42]] dramatic effect, even in cases when the action could be undone.

```
{-taH} <continuous>
```

This suffix indicates that an action is ongoing.
\{nughoStaH\} <it is approaching us> (\{ghoS\} <approach>) \{yIghoStaH\} <steady on course!, maintain this course!> (\{ghoS\} <go, approach, proceed on a course>)

Both of the above sentences suggest a continuing activity. The meaning of $\{-t a H\}$ can be seen clearly by comparing the following two commands:
\{yIjun\} <execute an evasive maneuver!> \{yIjuntaH\} <take evasive action!>

In the first case, the maneuver is to be executed once only. In the second, a series of evasive maneuvers is to be executed ---the action is to be continuous.
\{-lI'\} <in progress>
This suffix is similar to \{-taH\} <continuous> in that it indicates that an activity is ongoing. Unlike \{-taH,\} however, \{-lI'\} implies that the activity has a known goal or a definite stopping point. In other words, it suggests that progress is being made toward that goal.
\{chollI'\} <it is getting closer>
(\{chol\} <get close, come near>)

```
This word would be used for, i.e., a missile approaching a
target, when it is known that the missile has been aimed at
that target. If a missile is getting closer, but its intended
destination is not known, {choltaH} (with {-taH} <continuous>)
would be more appropriate.
{vIlI'lI'} <I am transmitting (the data)>
    ({lI'} <transmit data to a place>)
This word implies that data are in the process of being
transmitted, but that there is a finite amount of data, so there
will be a definite end to the transmission. The fact that the
verb {lI'} and the suffix {-lI'} are identical in sound is purely
coincidental, so far as can be determined.[[p.43]]
    The suffix {-taH} <continuous> can be used whether there is a
know goal or not. {-lI',} on the other hand, can be used only
when there is an implied goal. It is possible to consider {-lI'} a
<continuous> counterpart of {-ta',} and {-taH} a <continuous> coun-
terpart of {-pu'.}
4.2.8. Type 8: Honorific
{-neS} <honorific>
    There is but one suffix in this category. It is used to express
extreme politeness or deference. It is used only in addressing
a superior, someone of higher rank in the Klingon social,
political, or military hierarchy. It is never required.
    {qaleghneS} <I am honored to see you> ({legh} <see>)
    {HIja'neS} <do me the honor of telling me> ({ja'} <tell>)
This suffix is used rather infrequently by Klingons.
```

### 4.2.9. Type 9: Syntactic markers

Similar to Type 5 noun suffixes (section 3.3.5), these verb suffixes have to do with the verb's role in the sentence. The first six suffixes will be noted briefly here, but illustrated more completely in section 6.2.
\{-DI'\} <as soon as, when>
\{DaSeHDI'\} <as soon as you control if> (\{SeH\} <control>)
\{qara'DI'\} <as soon as I command you> (\{ra'\} <command>)
\{-chugh\} <if>
\{DaneHchugh\} <if you want them> (\{neH\} <want>)
\{choja'chugh\} <if you tell me> (\{ja'\} <tell>)
\{-pa'\} <before>
\{choja'pa'\} <before you tell me> (\{ja'\} <tell>)
\{qara'pa'\} <before I command you> (\{ra'\} <command>)
\{-vIS \} <while>

This suffix is always used along with the Type 7 suffix
$\{-$ taH $\}<c o n t i n u o u s .>[[p .44]]$
\{SutlhtaHvIS\} <while they are negotiating> (\{Sutlh\} <negotiate>) \{bIQongtaHvIS\} <while you are sleeping> (\{Qong\} <sleep>)
\{-bogh \} <which>
This is the relative-clause marker. It is described in section 6.2.3.
\{-meH \} <for>
This marks purpose clauses. See section 6.2.4.
\{-'a'\} <interrogative>
This suffix indicates that the sentence is a yes/no question; that is, a question which can be answered ``yes'' or ``no.'' (See also section 6.4.).
\{cholegh'a'\} <do you see me?> (\{legh\} <see>)
\{yaj'a'\} <does he/she understand?> (\{yaj\} <understand>)
Questions of other types require special question words (section 6.4).
\{-wI'\} <one who does, thing which does>

This is the suffix described earlier (section 3.2.2) which turns verbs into nouns.

```
{So'wI'} <cloaking device> ({So'} <cloak, hide>)
{baHwI'} <gunner> ({baH} <fire [a torpedo]>)
{joqwI'} <flag> ({joq} <flutter, wave>)
```

4.2.10. Relative ordering of the suffixes

As with nouns, when more than one suffix is used with a verb, they must occur in the correct order, according to their type. No more than one suffix of each type may occur at a time. No instances have been found of a verb followed by nine suffixes, but it is theoretically possible. A few examples should suffice to show ordering of the suffixes.

```
{nuHotlhpu''a'} <have they scanned us?>
    {nu-} (prefix) <they--us>
    {Hotlh} (verb) <scan>[[p.45]]
    {-pu'} (7) <perfective>
    {-'a'} (9) <interrogative>
{Qaw''eghpu'} <he/she destroyed himself/herself>
    0 (prefix) <he/she>
    {Qaw'} (verb) <destroy>
    {-'egh} (1) <oneself>
    {-pu'} (7) <perfective>
```

| ```{wIchenmoH {wI-} {chen} {-moH} {-laH}``` | laH\} <we (prefix) (verb) <br> (4) <br> (5) | ```can create it> <we--it> <take form> <cause> <can, able>``` |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { \{Daqawlu't } \\ & \quad\{\text { Da- } \\ & \{\text { qaw }\} \\ & \left\{-l u{ }^{\prime}\right\} \\ & \{- \text { taH }\} \end{aligned}$ | aH\} <you (prefix) (verb) <br> (5) <br> (7) | ```are to be remembered> <you--him/her> <remember> <indefinite subject> <continuous>``` |
| $\begin{aligned} & \text { \{vItlhapnI } \\ & \quad \text { \{vI-\} } \\ & \text { \{tlhap\} } \\ & \{-n I S\} \\ & \{-p u '\} \end{aligned}$ | Spu'\} <I (prefix) (verb) (2) (7) | ```needed to take him/her> <I--him/her> <take> <need> <perfective>``` |

\{HeghqangmoHlu'pu'\} <it made him/her willing to die> 0 (prefix) <he/she--him/her>
\{Hegh\} (verb) <die>
\{-qang\} (2) <willing>
\{-moH\} (4) <cause>
\{-lu'\} (5) <indefinite subject>
\{-pu'\} (7) <perfective>
\{maghoSchoHmoHneS'a'\} <may we execute a course (to some place) ?>
\{ma-\} (prefix) <we>
\{ghoS\} (verb) <proceed on a course>
\{-choH\} (3) <change>
\{-moH\} (4) <cause>
\{-neS\} (8) <honorific>
\{-'a'\} (9) <interrogative>[[p.46]]

### 4.3. Rovers

There is one additional set of verb suffixes which Klingon grammarians call \{lengwI'mey\} <rovers> (from \{leng\} <travel, roam, rove, > \{-wI'\} <thing which does,> \{-mey\} <plural>). Rovers are verb suffixes which do not have a fixed position in relation to the other suffixes following a verb but, instead, can come just about anywhere except following a Type 9 suffix. Their position is determined by the meaning intended. There are two types of rovers: the negative and the emphatic.
\{-be' \} <not>

This is the general suffix of negation, translated as English <not.> It follows the concept being negated.
\{vIlo'laHbe'\} <they are useless to me, I cannot use them> \{vI-\} (prefix) <I--them> \{lo'\} (verb) <use>
\{-laH\} (5) <can, able>
\{-be'\} (rover) <not>
\{jISaHbe'\} <I don't care (which of several courses of action is followed)>

```
    {jI-} (prefix) <I>
    {SaH} (verb) <care, be concerned about>
    {-be'} (rover) <not>
    {qay'be'} <it's not a problem, no problem (exclamation)>
    0 (prefix) <it>
    {qay'} (verb) <be a problem, be a hassle>
    {-be'} (rover) <not>
```

The roving nature of $\left\{-b e^{\prime}\right\}$ is best illustrated in the following set of words.
\{choHoHvIp\} <you are afraid to kill me>
\{choHoHvIpbe'\} <you are not afraid to kill me>
\{choHoHbe'vIp\} <you are afraid to not kill me>
\{cho-\} (prefix) <you--me>
\{HoH\} (verb) <kill>
\{-vIp\} (2) <afraid>
\{-be'\} (rover) <not>
In the second word, the negated notion is <afraid> (that is, <not afraid>), and \{-be'\} follows \{-vIp.\} In the third word, the negated notion is <kill> (that is, <not kill>), so \{-be'\} follows \{HoH.\}[[p.47]]

The suffix $\{-\mathrm{be}$ '\} cannot be used with imperative verbs. For imperatives, the following suffix is required.
\{-QO'\} <don't!, won't>
This negative suffix is used in imperatives and to denote refusal.

\{HIHoHvIpQo'\} <don't be afraid to kill me!> \{HI-\} (prefix) <imperative: you--me> \{HoH\} (verb) <kill> \{-vIp\} (2) <afraid> \{-Qo'\} (rover) <don't!>

Unlike \{-be',\} the position of \{-Qo'\} does not change: it occurs last, unless followed by a Type 9 suffix. Nevertheless, it is considered a rover because it is the imperative counterpart to \{-be'. \}
\{-Ha'\} <undo>
This negative suffix implies not merely that something is not done (as does \{-be'\}), but that there is a change of state: something that was previously done is now undone. For convenience, it will here be translated as <undo,> but it is closer to the English prefixes <mis-, de-, dis-> (as in <misunderstand,
demystify, disentangle>). It is also used if something is done wrongly. Unlike \{-be', -Ha'\} can be used in imperatives.

This verb actually means something like it can cause them to undo their form.
\{yIchu'Ha'\} <disengage it! (e.g., cloaking device)>
\{yI-\} (prefix) <imperative: you--it>
\{chu'\} (verb) <engage, activate> \{-Ha'\} (rover) <undo>
\{bIjatlhHa'chugh\} <if you say the wrong thing> \{bI-\} (prefix) <you> \{jatlh\} (verb) <say> \{-Ha'\} (rover) <undo> \{-chugh\} (9) <if>

This shows how \{-Ha'\} can be used in the sense of <wrongly.> The word might be translated as <if you misspeak.> Using \{-be'\} (that is, \{bIjatlhbe'chugh\}) would mean <if you don't speak.>
\{Do'Ha'\} <it is unfortunate>
0 (prefix) <it>
\{-Do'\} (verb) <be lucky, fortunate>[[-Do'=Do']]
\{-Ha'\} (rover) <undo>
The use of $\left\{-H a^{\prime}\right\}$ in this sentence suggests a turn of luck from good to bad.

It is interesting that $\left\{-H a^{\prime}\right\}$ always occurs right after the verb. It is not known why Klingon grammarians insist on calling it a rover. It was felt best not to argue with Klingon tradition, however, so \{-Ha'\} is here classified as a rover.
\{-qu'\} <emphatic>
This suffix emphasizes or affirms whatever immediately precedes it.
\{yIHaghqu'\} <study him/her well>[[Hagh=>HaD]]
\{yI-\} (prefix) <imperative: you--him/her>
\{Hagh\} (verb) <study>[[Hagh=>HaD]]
\{-qu'\} (rover) <emphatic>
\{nuQaw'qu'be'\} <they have not finished us off> \{nu-\} (prefix) <they--us>[[p.49]] \{Qaw'\} (verb) <destroy> \{-qu'\} (rover) <emphatic> \{-be'\} (rover) <not>

The roving nature of $\{-q u '\}$ can be seen in the following set:
\{pIHoHvIpbe'qu'\} <we are NOT afraid to kill you>
\{pIHoHvIpqu'be'\} <we are not AFRAID to kill you>

```
{pIHoHqu'vIpbe'} <we are not afraid to KILL you>
    {pI-} (prefix) <we--you>
    {HoH} (verb) <kill>
    {-vIp} (2) <afraid>
    {-be'} (rover) <not>
    {-qu'} (rover) <emphatic>
```

The first word above might be used after an enemy challenged the bravery of the speaker. The second might be followed by an explanation such as, ‘'We are not willing to kill you because we require your services.'' The third word would be used to emphasize killing, as opposed to some other form of punishment.

The rover \{-qu'\} also follows verbs when they are used adjectivally (section 4.4).

### 4.4 Adjectives[[4.4=>4.4.]]

There are no adjectives as such in Klingon. Those notions expressed as adjectives in English (such as <big, tired>) are expressed by verbs in Klingon (<be big, be tired>). A verb expressing a state or quality can be used immediately following a noun to modify that noun.

```
{puq Doy'} <tired child>
```

\{puq\} <child>
\{Doy'\} <be tired>
\{Dujmey tIn\} <big ships>
\{Dujmey\} <ships, vessels>
\{tIn\} <be big>

The rover $\{-q u '\}$ <emphatic> (section 4.3) may follow verbs functioning adjectivally. In this usage, it is usually translated <very.>
\{Dujmey tInqu'\} <very big ships>[[p.50]]
\{wanI' ramqu'\} <a very unimportant event>
\{wanI'\} <event, occurrence>
\{ram\} <be trivial, unimportant>

If a Type 5 noun suffix is used (section 3.3.5), it follows the verb, which, when used to modify the noun in this way, can have no other suffix except the rover \{-qu'\} <emphatic.> The Type 5 noun suffix follows \{-qu'.\}
\{veng tInDaq\} <in the big city>
\{veng\} <city>
\{tIn\} <be big>
\{-Daq\} <locative>
\{veng tInqu'Daq\} <in the very big city>[[p.51]]
5. OTHER KINDS OF WORDS

By far the bulk of Klingon words are nouns and verbs. There are a few others which, probably as an expedient, Klingon grammarians lump together in a group called \{chuvmey\}
<leftovers.> It is possible to classify the \{chuvmey\} somewhat.

### 5.1. Pronouns

In addition to possessive suffixes for nouns (section 3.3.4) and pronominal prefixes for verbs (section 4.1), there is a set of nine pronouns which are independent words.[[nine=>ten]]

```
{jIH} <I, me> {maH} <we, us>
{soH} <you> {tlhIH} <you (plural)>[[soH=>SoH]]
{ghaH} <he/she, him/her> {chaH} <they, them>
{'OH} <it> {bIH} <they, them>
{'e'} <that>
{net} <that>
```

The pronoun \{chaH\} <they> is used when it refers to a group of beings capable of using language; otherwise, $\{b I H\}$ <they> is used. The pronouns \{'e'\} and \{net\} are used only in special sentence constructions (see section 6.2.5).

There is no grammatical gender in Klingon. Third-person[[p.52]] singular pronouns can be translated <he> or <she> as context dictates.

Pronouns may be used as nouns, but only for emphasis or added clarity. They are not required. Thus, the following sets of sentences are all grammatically correct.

```
{yaS vIlegh jIH} <I see the officers.>
```

\{yaS vIlegh\}
\{jIH mulegh yaS\} <The officer sees me.>
\{mulegh yaS \}
\{ghaH vIlegh jIH\} <I see him/her.>
\{ghaH vIlegh\}
\{vIlegh jIH\}
\{vIlegh \}
(\{yaS\} <officer,> \{vIlegh\} <I see him/her,> \{mulegh\} <he/she sees
me>)

The final two sentences (\{vIlegh jIH, vIlegh\}) are in fact ambiguous. They could equally well mean <I see them.> (The verb prefix $\{v I-\}$ is either <I--him/her> or <I--them.>) If context does not make it clear which meaning is intended, pronouns can be used:
\{ghaH vIlegh\} <I see him/her.>
\{chaH vIlegh\} <I see them.>
Pronouns are not used in possessive constructions in the way nouns are; instead, the set of possessive noun suffixes is used (section 3.3.4).

Finally, pronouns can be used as verbs, in the sense of "'I am,'' etc. (See section 6.3).

### 5.2. Numbers

Klingon originally had a ternary number system; that is, one
based on three. Counting proceeded as follows: 1, 2, 3; 3+1, $3+2,3+3 ; 2 \times 3+1,2 \times 3+2,2 \times 3+3 ; 3 \times 3+1,3 \times 3+2$,
$3 \times 3+3$; and then it got complicated. In accordance with the more accepted practice, the Klingon Empire sometime back adopted a decimal number system, one based on ten.[[p.53]] Though no one knows for sure, it is likely that this change was made more out of concern for understanding the scientific data of other civilizations than out of a spirit of cooperation.

The Klingon numbers are:

| 1 | \{wa'\} | 6 | \{jav $\}$ |
| :--- | :--- | :--- | :--- |
| 2 | \{cha'\} | 7 | \{Soch $\}$ |
| 3 | \{wej\} | 8 | \{chorgh $\}$ |
| 4 | \{loS\} | 9 | \{Hut $\}$ |
| 5 | \{vagh \} | 10 | \{wa'maH $\}$ |

Higher numbers are formed by adding special number-[[keep hyphen]] forming elements to the basic set of numbers (1--9). Thus, \{wa'maH\} <ten> consists of \{wa'\} <one> plus the number-forming element for <ten,> \{maH.\} Counting continues as follows:

```
1 1 ~ \{ w a ' m a H ~ w a ' \} ~ ( t h a t ~ i s , ~ < t e n ~ a n d ~ o n e > ) ~
12 {wa'maH cha'} (that is, <ten and two>)
etc.
```

Higher numbers are based on \{maH\} <ten,> \{vatlh\} <hundred,> and \{SaD\} or $\{S a n I D\}$ <thousand.> Both \{SaD\} and \{SanID\} are equally correct for <thousand,> and both are used with roughly equal frequency. It is not known why this number alone has two variants.

| 20 | \{cha'maH \} | (that is, | <two tens>) |
| :---: | :---: | :---: | :---: |
| 30 | \{we jmaH \} | (that is, | <three tens>) |
| etc. |  |  |  |
| 100 | \{wa'vatlh \} | (that is, | <one hundred>) |
| 200 | \{cha'vatlh\} | (that is, | <two hundreds>) |
| etc. |  |  |  |
| 1,000 | \{wa'SaD or \{wa'SanID\} | (that is, | <one thousand>) |
| 2,000 | \{cha'SaD\} or \{cha'SanID\} | (that is, | <two thousands>) |
| etc. |  |  |  |

Numbers are combined as in English:

```
5,347 {vaghSad wejvatlh loSmaH Soch} or[[vaghSad=>vaghSaD]][[p.54]]
```

\{vaghSanID wejvatlh loSmaH Soch\}
604 \{javvatlh loS\}
31 \{wejmaH wa'\}

Some of the number-forming elements for higher numbers are:

```
ten thousand {netlh}
hundred thousand {bIp}
million {'uy'}
Zero is {pagh.}
```

```
    Numbers are used as nouns. As such, they may stand alone
as subjects or objects or they may modify another noun.
```

```
{mulegh cha'} <Two (of them) see me.>
```

{mulegh cha'} <Two (of them) see me.>
({mulegh} <they see me,> {cha'} <two>)
({mulegh} <they see me,> {cha'} <two>)
{wa' yIHoH} <Kill one (of them)!>
{wa' yIHoH} <Kill one (of them)!>
({wa'} <one,> {yIHoH} <kill him/her!>)
({wa'} <one,> {yIHoH} <kill him/her!>)
The preceding sentence is grammatically correct even without
the {wa'} because the prefix {yI-} indicates a singular object. The
{wa',} therefore, is used for emphasis only.
Numbers used as modifiers precede the noun they modify.
{loS puqpu'} or {loS puq} <four children>
{vaghmaH yuQmey} or {vaghmaH yuQ} <fifty planets>
The plural suffixes ({-pu', -mey}) are not necessary when a
number is used.
When a number is used for numbering, as opposed to
counting, it follows the noun. Compare:
{DuS wa'} <torpedo tube number 1>
{wa' DuS} <one torpedo tube>
Ordinal numbers (<first, second,> etc.) are formed by adding
{-DIch} to the numbers.
{wa'DIch} <first>
{cha'DIch} <second>
{HutDIch} <ninth>
Ordinal numbers follow the noun.
{meb cha'DIch} <second guest>[[p.55]]
Adding {-logh} to a number gives the notion of repetitions.
{wa'logh} <once>
{cha'logh} <twice>
{Hutlogh} <nine times>
These numbers function in the sentence as adverbials (section
5.4).

```

\subsection*{5.3. Conjunctions}
```

Conjunctions are of two types: those that join nouns together
and those that join sentences together. The meanings of the
two types of conjunctions, however, are the same:
JOINING NOUNS JOINING SENTENCES
{je} {'ej} <and>
{joq} {qoj} <and/or>
{ghap} {pagh} <either/or>
The conjunctions joining nouns come after the final noun.
{DeS 'uS je} <an arm and a leg>

```
```

{DeS 'uS joq} <an arm or a leg or both>
{DeS 'eS ghap} <either an arm or a leg (but not both)>

```

The noun conjunction \(\{j e\}\) has an additional function: when it follows a verb, it means <also, too.>
```

{qaleghpu' je} <I also saw you, I saw you too>

```

As in English, the meaning of such sentences is ambiguous: <I and others saw you> or <I saw you and others.> The exact meaning is determined by context.

In addition to the three listed above, there is one other sentence conjunction:
\{'ach\} <but, nevertheless, however, even so>
This word is sometimes shortened to \{'a.\}
The conjunctions joining sentences occur between the sentences they join. For illustrations, see section 6.2.1.

\subsection*{5.4. Adverbials}

These words usually come at the beginning of a sentence and describe the manner of the activity.[[p.56]]
```

{batlh} <with honor, in an honored fashion>
{bong} <by accident, accidentally, not intentionally>
{chaq} <perhaps>
{chIch} <on purpose, purposely>
{DaH} <now>
{Do'} <with luck, luckily>
{loQ} <slightly, a little bit>
{nom} <fast, quickly>
{not} <never>
{pay'} <suddenly>
{pIj} <often>
{QIt} <slowly>
{reH} <always>
{rut} <sometimes>
{tugh} <soon>
{vaj} <thus, in that case, so, accordingly, then>
{wej} <not yet>

```

Examples:
```

{bong yaS vIHoHpu'} <I accidentally killed the officer.>

```
                                    (\{yaS\} <officer,> \{vIHoHpu'\} <I killed
    him/her>)
\{batlh Daqawlu'taH\} <You will be remembered with honor.>
                                    (\{Daqawlu'taH\} <somebody continues to
                    remember you>)
\{vaj Daleghpu'\} <Then you have seen it.>
                (\{Daleghpu'\} <you have seen it>)
\{wej vIlegh\} <I don't see him/her yet>
    (\{vIlegh\} <I see him/her>)

One word fits somewhat awkwardly into this category:
\{neH\} <only, merely, just>

Unlike the other adverbials, it follows the verb which it modifies. The semantic effect is one of trivializing the action.
\{qama' vIqIppu' neH\} <I merely hit the prisoner.>
(\{qama'\} <prisoner,> \{vIqIppu'\} <I hit him/
her>)
\{Duj ylQotlh neH\} <Just disable the ship!>
(\{Duj\} <ship, vessel,> \{yIQotlh\} <disable it!>)
[ [p.57]]
The use of \(\{n e H\}\) in the preceding sentence implies that the ship is to be disabled, but not damaged further.

Also unlike the other adverbials, \{neH\} can follow a noun. In such cases, it means <only, alone.>
\{yas neH\} <only the officer, the officer alone> \{jonta' neH\} <only the engine>

Adverbials sometimes occur alone, functioning more or less as exclamations (section 5.5). For example:
\{nom\} <Move fast! Move quickly!>
\{wej\} <Don't do it yet!>
\{tugh\} <Hurry up!>
5.5 Exclamations[[5.5=>5.5.]]

These expressions stand as sentences in their own right.
\{ghobe'\} <No.> (response to a question)
\{Ha'\} <Let's go! Come on!>
\{HIja'\} or \{HISlaH\} <Yes.> (response to a question)
\{lu'\} or \{luq\} <Yes. Okay. I will.>
\{maj\} <Good.> (expressing satisfaction)
\{majQa'\} <Very good. Well done.>
\{nuqneH\} <What do you want?> (greeting)
\{pItlh\} <Done!>
\{QO'\} <No. I won't. I refuse.>
\{SuH\} or \(\left\{\right.\) Su' \(\left.^{\prime}\right\}<\) Ready! \(>\)
\{toH\} <Well! So!>
\{wejpuH\} <Charming.> (used only ironically)
\{'eH\} <Ready!>
\{HIja'\} and \{HISlaH\} <yes> seem to be used interchangeably.
\{SuH, Su',\} and \{'eH\} all mean that the speaker is about to give a command. They are comparable to the `'Ready!'' at the beginning of a race: '`Ready! Set! Go!'' \{SuH\} and \{Su',\} but not \{'eH,\} can also be used to indicate that the speaker is ready to do something or that arrangements have been made for
something to happen. Some speakers of Klingon pronounce
\{SuH\} as if it were \{SSS,\} almost like the English expression for ``be quiet'': <shhh!>
\{pItlh\} is used for <It's done! I've done it! I've finished! All done!> etc.[[p.58]]

The expression \(\{t o H\}\) is roughly equivalent to English <aha!>
Also included in the category of exclamations are Klingon curses. Only three such curses have been noted to date.
```

{QI'yaH} <*?!\#@>

```
\{ghuy'cha'\} <*@\$\%>
\{Qu'vatlh\} <\#*@!>
5.6. Names and address

Klingon names are frequently mispronounced by non-[[keep hypen]] Klingons. Furthermore, when written in the writing systems of other languages, they usually end up with spellings which only suggest their true pronunciation. For example, the Klingon sound \{tlh\} at the beginning of a word is almost always written <kl> by English speakers, presumably because the sound <tl> cannot occur at the beginning of an English word. Similarly, Klingon \(\{Q\}\) is often rendered <kr,> and Klingon \(\{q\}\) always comes out <k.>

The following is a list of a few Klingon names along with their usual English spellings.
\begin{tabular}{ll} 
\{mara\} & <Mara> \\
\{matlh\} & <Maltz> \\
\{qeng\} & <Kang> \\
\{qeylIS \} & <Kahless> \\
\{qolotlh\} & <Koloth> \\
\{qor\} & <Kor> \\
\{qoreQ\} & <Korax> \\
\{QaS\} & <Kras> \\
\{Qel\} & <Krell> \\
\{Qugh \} & <Kruge> \\
\{torgh\} & <Torg> \\
\{valQIS \} & <Valkris>
\end{tabular}

Names may be used in direct address (that is, calling somebody by name) at the beginning or end of the sentence. Other words in direct address (such as \{qaH\} <sir,> \{joHwI'\} <my lord>) are used similarly.
```

{torgh HIghoS} <Torg, come here!> ({HIghoS} <pro-

```
    ceed toward me!>)
\{lu' qaH\} <Yes, sir!>[[p.59]]

\section*{6. SYNTAX}

As in any language, Klingon sentences range from the very simple and straightforward to the very complex and convoluted. What follows here are the mere basics of Klingon sentence structure. This information should provide a good foundation so that students of Klingon can converse properly, though not eloquently, while learning more about the language.
6.1. Basic sentences

The basic structure of a Klingon sentence is:
OBJECT--VERB--SUBJECT

This the reverse of the order in English, so care should be taken to avoid interpreting sentences backward. The subject is the person or thing doing the action described by the verb; The object is the recipient of that action.

The importance of word order can be seen by comparing
the following sentences.
\{puq legh yas\} <The officer sees the child.>
\{yaS legh puq\} <The child sees the officer.>
In both sentences, the words are identical: \{puq\} <child,> \{legh\}
[ [p.60]]
<he/she sees him/her,> \{yas\} <officer.> The only way to know who is seeing whom is by the order of the words in the sentence. The
verb \{legh\} is preceded by the prefix 0 <he/she--him/her.>
When the subject and/or object is first or second person, the prefix on the verb must be the proper one.
```

{puq vIlegh jIH} <I see the child.>
({vIlegh} <I see him/her>)
{jIH mulegh puq} <The child sees me.>
({mulegh} <he/she sees me>)

```

Actually, the first- and second-person pronouns are seldom used in sentences of this type (though they can, as here, be used for emphasis), so the following sentences illustrate more commonly occurring sentence types.
```

    {puq vIlegh} <I see the child.>
    ```
    \{mulegh puq\} <The child sees me.>
    Imperative sentences (commands) follow the same rules.
\{So'wI' yIchu'\} <Engage the cloaking device!>
                        (\{So'wI'\} <cloaking device,>
                        \{yIchu'\} <engage it!>)
\{DoS yIbuS\} <Concentrate on the target!>
    (\{DoS\} <target,> \{yIbuS\} <concentrate on it!>)
\{yaSpu' tIHoH\} <Kill the officers!>
                            (\{yaSpu'\} <officers,> \{tIHoH\} <kill them!>)

Any noun in the sentence indicating something other than subject or object comes first, before the object noun. Such nouns usually end in a Type 5 noun suffix (section 3.3.5).
```

{pa'Daq yaS vIleghpu'} <I saw the officer in the room.>
({pa'Daq} <in the room,>
{yaS} <officer,> {vIleghpu'} <I saw him/
her>)

```

Other examples of this construction are given in section 3.3.5.
6.2. Complex sentences

A few of the more common types of more elaborate Klingon sentences will be illustrated.[[p.61]]

\subsection*{6.2.1. Compound sentences}

Two sentences may be joined together to form a longer compound sentence. Both sentences must be able to stand alone as properly formed sentences. When combined, they simply come one after the other, joined by a conjunction (see section 5.3).
```

{jISoptaH 'ej QongtaH} <I am eating, and he/she is
sleeping.>
{jISoptaH 'ach QongtaH} <I am eating, but he/she is
sleeping.>
{bISoptaH qoj bItlhutlhtaH} <You are eating and/or
you are drinking.>
{bISoptaH pagh bItlhutlhtaH} <You are either eating or else
    you are drinking.>

```

When the subject of both of the joined sentences is the same, the English translation may be reduced to a less choppy form, but Klingon does not allow this shortening. The pronominal prefix must be used with both verbs. Thus, the final two sentences above may be translated <You are eating and/or drinking; You are either eating or drinking.>

When a noun (as opposed to simply a verbal prefix)
indicates subject and/or object, there are some options in
Klingon. In its fullest form, a Klingon sentence repeats the
noun:
\{yaS legh puq 'ej yaS qIp puq\}
    (\{yaS\} <officer,> \{puq\} <child,> \{legh\} <he/she sees
    him/her,> \{qIp\} <he/she hits him/her>)
    <The child sees the officer and the child hits
    the officer.>
            or
        <The child sees the officer and hits the officer.>
            or
        <The child sees and hits the officer.>
It is possible, however, to use pronouns rather than nouns in
the second of the joined sentences.[[p.62]]
\{yaS legh puq 'ej ghaH qIp ghaH\} (\{ghaH\} <he/she>)
        <The child sees the officer and he/she hits him/her.>
            or
        <The child sees the officer and hits him/her.>
If the context is clear, even the pronoun may be left out.
\{yaS vIlegh 'ej vIqIp\} (\{vI-\} <I--him/her>)
    <I see the officer and I hit him/her.>
        or
    <I see the officer and hit him/her.>
            or
        <I see and hit the officer.>
6.2.2. Subordinate clauses

Klingon verbs ending in Type 9 suffixes (other than \{-'a'\} <interrogative> and \{-wI'\} <one who does, one which does>) always occur in sentences with another verb. Hence, they are verbs in subordinate clauses.
\{cha yIbaH qara'DI'\}
or \(\{q a r a ' D I ' ~ c h a ~ y I b a H\} ~<F i r e ~ t h e ~ t o r p e d o e s ~ a t ~ m y ~ c o m-~\) mand!>

The two parts of this sentence are \{cha yIbaH\} <fire the torpedoes!> and \{qara'DI'\} <when I command you> or <as soon as I command you.> \{-DI'\} is a Type 9 suffix meaning <as soon as, when,> so \{qara'DI'\} must occur as part of a larger sentence. Note that the order of the two parts of the sentence is variable.

A few further examples should make the use of subordinate clauses clear.
\[
\begin{aligned}
& \text { \{bIjatlhHa'chugh qaHoH\} } \\
& \text { or }\{q a H o H \text { bIjatlhHa'chugh\} <If you say the wrong thing, } \\
& \text { I will kill you.> } \\
& \text { (\{bIjatlhHa'chugh\} <if you } \\
& \text { misspeak,> \{qaHoH\} <I kill } \\
& \text { you>) }
\end{aligned}
\]

Note that although the English translation uses the word <will,> there is no marker for future in Klingon. The unsuffixed verb \{HoH\} <kill> is neutral as to time: since the person being[[p.63]] addressed is being given a chance to speak, that person must still be alive. Thus, the killing must take place in the future.
\{SutlhtaHvIS chaH DIHIvpu'\}
or \(\{D I H I v p u '\) SutlhtaHvIS chaH\} <While they were negotiating we attacked them.> (\{SutlhtaHvIS\} <while they are negotiating,> \{chaH\} <they,> \{DIHIvpu'\} <we attacked them>)

The notion of <were negotiating,> rather than <are negotiating,> comes from the suffix \(\{-\mathrm{pu}\) '\} <perfective> attached to the verb \(\{H I v\}\) <attack.> A translation such as <While they are negotiating we attacked them> makes little sense in English and misrepresents the meaning of the Klingon sentence.

\subsection*{6.2.3. Relative clauses}

Relative clauses are translated into English as phrases beginning with <who, which, where,> and, most commonly, <that.> Like adjectives, they describe nouns: <the dog which is running, the cat that is sleeping, the child who is playing, the restaurant where we ate.> The noun modified by a relative clause is the head noun.

In Klingon, the verb in the relative clause ends with the Type 9 suffix \(\{-b o g h\),\(\} which will, for convenience, be translated\) <which.>

Whether the head noun follows or precedes the relative clause depends on its relationship to that clause. Compare the
following:
\{qIppu'bogh yaS\} <officer who hit him/her>
\{yaS qIppu'bogh\} <officer whom he/she hit>
In both phrases, the relative clause is \{qIppu'bogh\} (\{qIp\} <hit,> \{-pu'\} <perfective,> \{-bogh\} <which>), and the head noun is \{yaS\} <officer.> In the first phrase, \{yaS\} is the subject of the verb \{qIp\} (the officer is doing the hitting), so it follows \{qIppu'bogh, \} just as all subjects follow the verb. In the second phrase, \{yaS\} is the [[p.64]]
object (the officer is getting hit), so it precedes \{qIppu'bogh, \} just as all objects precede the verb.

The whole construction (relative clause plus head noun), as a unit, is used in a sentence as a noun. Accordingly, this construction follows or precedes the verb of the sentence, depending on whether it is the subject or object.
```

{qIppu'bogh yaS vIlegh} <I see the officer who hit
him/her.>

```

The entire relative construction \{qIppu'bogh yaS\} <officer who hit him/her> is the object of the verb \{vIlegh\} <I see him/her,> so it precedes the verb.
\{mulegh qIppu'bogh yaS\} <The officer who hit him/her sees me.>

Here, \{qIppu'bogh yaS\} is the subject of the verb \{mulegh\} <he/she sees me,> so it follows the verb.

This pattern is also followed when the head noun is the object of the verb in the relative clause, such as \{yaS qIppu'bogh\} <officer whom he/she hit.>
\{yaS qIppu'bogh vIlegh\} <I see the officer whom he/she hit.>
\{mulegh yaS qIppu'bogh\} <The officer whom he/she hit sees me.>

In the English translation, the relative pronouns (<that, which,> etc.) may often be omitted: <I see the officer he/she hit, the officer he/she hit sees me.> In Klingon, however, \{-bogh\} is mandatory.

\subsection*{6.2.4. Purpose clauses}

If an action is being done in order to accomplish something, or for the purpose of accomplishing something, the verb describing what is to be accomplished ends with the Type 9 suffix \(\{-m e H\),\(\} which may be translated <for, for the purpose of,\) in order to.> The purpose clause always precedes the noun or verb whose purpose it is describing.
\{ja'chuqmeH rojHom neH jaghla'\} <The enemy commander[[jaghla'=>jagh la']
```

                                    wishes a truce (in order)
    ```
                                    to confer.>[[p.65]]

The phrase \{ja'chuqmeH rojHom\} <a truce (in order) to confer> is
the object of the verb \(\{n e H\}\) <he/she wants it; \(>\) the subject is \{jaghla'\} <enemy commander.> The object is a noun \{rojHom\} <truce> [[jaghla'=>jagh la']]
preceded by the purpose clause \{ja'chuqmeH\} <for the purpose of conferring> or <in order to confer.> (The verb is made up of \{ja'\} <tell,> \{-chuq\} <each other; > thus, <confer> is <tell each other.>)

\section*{\{jagh luHoHmeH jagh lunejtaH\} <They are searching for the enemy in order to kill him/her.>}

Here the purpose clause is \{jagh luHoHmeH\} <in order for them to kill the enemy,> which is made up of the object noun \{jagh\} <enemy> preceding the verb \{luHoHmeH\} <in order for them to kill him/her> (\{lu-\} <they--him/her,> \{HoH\} <kill,> \{-meH\} <for>). It describes
the purpose of the verb \{lunejtaH\} <they are searching for him/her> (\{lu-\} <they--him/her,> \{nej\} <seek, search for,> \{-taH\} <continu-
ous>). Note that, just as in compound sentences, the object noun \{jagh\} <enemy> occurs before each verb for which it is the object. Thus, somewhat more literally, the sentence may be translated <In order to kill the enemy, they are searching for the enemy.>

Furthermore, just as in compound sentences, the second of two identical nouns may be replaced by a pronoun or, if the context, is clear, left out altogether.
\{jagh luHoHmeH ghaH lunejtaH\}
\{jagh luHoHmeH lunejtaH\} <They are searching for the enemy in order to kill
him/her.>

\subsection*{6.2.5. Sentences as objects}

Klingon has two special pronouns, \{'e'\} and \{net, \} which refer to the previous sentence as a whole. They are used primarily, not exclusively, with verbs of thinking or observation (such as <know, see>). They are always treated as the object verb, and the verb always takes a prefix indicating a third-person singular object. What is a single sentence in English is often two sentences in Klingon. \{net\} is used only under special circumstances (see page 66), but \{'e'\} is common. Several examples should make the use of \{'e'\} clear.[[p.66]]
\{qama'pu' DIHoH 'e' luSov\} <They know we kill prisoners.>
This sentence is actually two: (1) \{qama'pu' DIHoH\} <We kill
prisoners> (\{qama'pu'\} <prisoners,> \{DIHoH\} we <kill them>); (2) \{'e' luSov\} <They know that> (\{'e'\} <that,> \{luSov\} <they know it>). The pronoun \{'e'\} refers to the previous sentence, <We kill prisoners.>
\{yaS qIppu' 'e' vIlegh\} <I saw him/her hit the officers.>
The two sentences here are: (1) \{yaS qIppu'\} <He/she hit the officer;> (2) \{'e' vIlegh\} <I see that> (\{vIlegh\} <I see it>). The construc-
tion might equally well be translated as <I saw that he/she hit
the officer.> Note that the verb in the second sentence, \{vIlegh\} <I see it, \(>\) is neutral as to time. The past tense of the translation <(I saw...) \(>\) comes from the verb in the first sentence, \{qIppu'\} <he/she hit him/her> (\{-pu'\} <perfective>). In complex sentences of this type, the second verb never takes an aspect suffix (section 4.2.7).

When the verb of the second sentence has a third-person subject (that is, the pronominal prefix is 0 ) but the intended meaning is <one> or <someone,> rather than <he, she, it,> or <they,> \{net \} is used instead of \{'e'.\}
\{qama'pu' DIHoH net Sov\} <One knows we kill prisoners.>
As above, the first sentence here is \{qama'pu' DIHoH\} <We kill prisoners.> The second sentence is \{net Sov\} <One knows that.> The full construction implies that it is common knowledge that the group to which the speaker belongs kills prisoners.
```

{Qu'vaD lI' net tu'bej} <One certainly finds it useful for

```
    the mission.>

The first part of this example is \{Qu'vaD lI'\} <It is useful for the mission> (\{Qu'vaD\} <for the mission,> \{lI'\} <it is useful>). The second part is \{net tu'bej\} <one certainly finds that> or <one certainly observes that.> The full construction might also be translated <One will certainly observe that it is useful to the mission.> Note that although the word <will> makes a more flowing translation, there is nothing in the Klingon sentence indicating future tense.

When the verb of the second sentence is \{neH\} <want,> neither[[p.67]] \{'e'\} nor \{net\} is used, but the construction is otherwise identical to that just described.
\{jIQong vIneH\} <I want to sleep.>
(\{jIlong\} <I sleep,> \{vIneH\} <I want it>)
\{qalegh vIneH\} <I want to see you.>
(\{qalegh\} <I see you,> \{vIneH\} <I want it>)
\{Dalegh vIneH\} <I want you to see him/her.>
(\{Dalegh\} <you see him/her,> \{vIneH\} <I want it>)
\{qama'pu' vIjonta' vIneH\} <I wanted to capture prisoners.>
In this final example, the first part is \{qama'pu' vIjonta'\} <I captured prisoners> (\{qama'pu'\} <prisoners,> \{vIjonta'\} <I captured them>). Note once again that the aspect marker (in this case, \{-ta'\} <accomplished>) goes with the first verb only; the second verb, \(\{v I n e H\}<I\) want it, \(>\) is neutral as to time. The past tense of the translation <(I wanted...)> comes from the aspect marker on the first verb.

Similarly, with verbs of saying (<say, tell, ask,> etc.), \{'e'\} and \{net\} are not used. The two phrases simply follow one another, in either order.
```

{qaja'pu' HIqaghQo'}

```
```

            or {HIqaghQo' qaja'pu'} <I told you not to interrupt me.>
    This is literally <I told you, ``Don't interrupt me!''> or <``Don't
interrupt me'' I told you> ({qaja'pu'} <I told you,> {HIqaghQo'} <don't
interrupt me!>). An aspect marker (here, {-pu'} <perfective>) may
always be attached to the verb of saying, regardless of
whether it is the first or second verb.
Finally, the use of {rIntaH} to indicate that an action is
accomplished (section 4.2.7) is another example of the two-[[keep
hyphen] ]
verb (or two-sentence) construction.
6.3. `'To be''
There is no verb corresponding to English <to be> in Klingon.
On the other hand, all pronouns (section 5.1) can be used as
verbs, in the sense of <I am, you are,> etc.
{tlhIngan jIH} <I am a Klingon.>[[p.68]]
{yaS SoH} <You are an officer.>
{puqpu' chaH} <They are children.>
The pronoun always follows the noun.
Similarly, there is no verb corresponding to <to be> in the sense of '"to be at a place.'' Again, the pronouns are used, followed, where appropriate, by verbal suffixes.
\{pa'wIjDaq jIHtaH\} <I am in my quarters.>
(\{pa'wIjDaq\} <in my room,> \{jIH\} <I,> \{-taH\} <continuous>)
In the above examples, the subjects are pronouns. If the subject is a noun, it follows the third-person pronoun (\{ghaH\} <he/she,> \{'oH\} <it,> \{chaH\} <they,> \{bIH\} <they>) and takes the \{-'e'\} <topic>
suffix (see section 3.3.5).
\{puqpu' chaH qama'pu' 'e'\} <The prisoners are children.>[[qama'pu' 'e'=>qama'pu''e']]
\{pa'DajDaq ghaHtaH la''e'\} <The commander is in his quarters.>
These sentences might also be translated <As for the prisoners, they are children; As for the commander, he is in his quarters.>

```

\subsection*{6.4. Questions}
```

There are two types of questions: those which may be answered '`yes'' or '`no,'' and those which require explanations as answers.
Yes/no questions are formed with the Type 9 suffix \{-'a'\}
added to the verb. Examples are given in section 4.2.9.
Appropriate answers to yes/no questions are:

```
```

{HIja'} or {HISlaH} <yes>

```
{HIja'} or {HISlaH} <yes>
{ghobe'} <no>
```

The other type of question contains a question word:

```
{chay'} <how?>
{ghorgh} <when?>
{nuq} <what?>
{nuqDaq} <where?>[[p.69]]
{qatlh} <why?>
{'ar} <how many? how much?>
{'Iv} <who?>
```

For \{'Iv\} <who?> and \{nuq\} <what?> the question word fits into the sentence in the position that would be occupied by the answer. For example:
\{yaS legh 'Iv\} <Who sees the officer?>
\{'Iv legh yaS\} <Whom does the officer see?>
In the first question, it is the subject which is being asked about, so \{'Iv\} <who?> goes in the subject position, following the verb \{legh\} <he/she sees him/her.> In the second case, the object is being questioned, so the question word goes in the object position, before the verb.

Similarly with \{nuq\} <what?:>
\{Duj ghoStaH nuq\} <What is coming toward the ship?>
(\{Duj\} <ship, vessel,> \{ghoStaH\} <it is proceeding toward it>)
\{nuq legh yaS\} <What does the officer see?>
Both \{'Iv\} and \{nuq\} are treated as nouns as far as the pronominal prefixes are concerned. That is, they are considered third person.
\{nughoStaH nuq\} <What is coming toward us?> (\{nughoStaH\} <it is proceeding toward us>)
\{nuq Dalegh\} <What do you see?> (\{Dalegh\} <you see it>)
The word for <where?,> \{nuqDaq,\} is actually \{nuq\} <what?> followed by the suffix \{-Daq\} <locative> (see section 3.3.5). As would any locative phrase (see section 6.1), it comes at the beginning of the sentence.
\{nuqDaq So'taH yaS\} <Where is the officer hiding?>
(\{So'taH\} <he/she is hiding>)
Three other question words likewise occur at the beginning of the sentence.[[p.70]]

```
{ghorgh Haw'pu' yaS} <When did the officer flee?>
```

    (\{Haw'pu'\} <he/she has fled>)
    \{qatlh Haw'pu' yaS\} <Why did the officer flee?>
\{chay' Haw'pu' yaS\} <How did the officer flee?>

Note also:
\{chay' jura'\} <What are your orders?>

```
This is actually {chay'} <how?,> {jura'} <you command us;> thus,
```

<How do you command us?>
The question word \{chay'\} <how?> may be used as a one-word

```
sentence meaning <How did this happen? What happened?
What the---?>
    Finally, {'ar} <how many? how much?> follows the noun to
which it refers. It can never follow a noun with a plural suffix
({-pu', -mey, -Du';} see section 3.3.2).
{Haw'pu' yaS 'ar} <How many officers fled?>
    ({Haw'pu'} <they fled,> {yaS} <officer>)
{nIn 'ar wIghaj} <How much fuel do we have?>
    ({nIn} <fuel,> {wIghaj} we <have it>)
```

### 6.5. Commands

Commands are given with appropriate imperative prefixes. See sections 4.1.2, 4.3.

### 6.6. Comparatives and superlatives

The idea of something being more or greater than something else (comparative) is expressed by means of a construction which can be represented by the following formula:

A Q \{law'\} B Q \{puS\}
In this formula, $A$ and $B$ are the two things being compared and $Q$ is the quality which is being measured. The two Klingon words in the formula are \{law'\} <be many> and \{puS\} <be few.> Thus, it says <A's Q is many, B's Q is few> or <A has more Q than B has> or $<A$ is Q-er than B.>

Any verb expressing a quality or condition may fit into the Q slot.[[p.71]]
\{la' jaq law' yaS jaq puS\} <The commander is bolder than the officer.> (\{la'\} <commander,> \{jaq\} <be bold,>
\{yaS \}
<officer>)

To express the superlative, that something is the most or the greatest of all, the noun $\{$ Hoch\} <all> is used in the B position:
\{la' jaq law' Hoch jaq puS\} <The commander is boldest of all.>

In comparative and superlative constructions, the verb of quality (\{jaq\} <be bold> in the sentences above) must be said twice.[[p.72]]

## 7. CLIPPED KLINGON

The preceding grammatical sketch describes ‘`proper'' Klingon, that is, Klingon as it is taught in Klingon schools or to non-Klingons. In actual day-to-day use, however, spoken Klingon may vary somewhat from its '`proper'' form, usually by leaving some elements out. This abbreviated form of speaking, called Clipped Klingon by Klingon grammarians, is heard quite frequently in military contexts where quick
---rather than eloquent---communication is deemed a virtue. Probably for similar reasons, Clipped Klingon is used quite extensively in all walks of Klingon life.

Some of the features of Clipped Klingon are described below.

### 7.1. Commands

In giving commands, the imperative prefix (section 4.1.2) may be left off, leaving the bare verb.

Proper Klingon: \{yIbaH\} <Fire (the torpedoes)!> Clipped Klingon: \{baH\}

Proper Klingon: \{wIy yIcha'\} <Show the tactical display!> Clipped Klingon: \{wIy cha'\}
(\{wIy\} <tactical display on monitor,> \{cha'\} <show, project>)
Proper Klingon: \{He chu' yIghoS\} <Follow a new course!>[[p.73]] Clipped Klingon: \{He chu' ghoS\}
( $\{\mathrm{He}\}$ <course,> $\{$ chu'\} <be new,> $\{$ ghoS \} <follow a course>)
When the object noun is critical, and what is to be done with that noun is obvious (or should be obvious) to the listener, that noun itself may serve as the command. Proper Klingon: \{chuyDaH yIlaQ\} <Fire the thrusters!> Clipped Klingon: \{chuyDaH\} <Thrusters!> (\{chuyDaH\} <thrusters,> \{laQ\} <fire, energize>)

Proper Klingon: \{HaSta yIcha'\} <Show the visual display!> Clipped Klingon: \{HaSta\} <Visual (display)!>
(\{HaSta\} <visual display on monitor,> \{cha'\} <show, project>)

Finally, other grammatical markers, particularly noun suffixes, may be left out of commands.

Proper Klingon: \{jolpa'Daq yIjaH\} <Go to the transport room!> Clipped Klingon: \{jolpa' yIjaH\}
(\{jolpa'\} <transport room,> \{-Daq\} <locative,> \{jaH\} <go>)
It is not common, when noun suffixes are chopped, for the imperative prefix on the verb to be dropped as well.
7.2. Responses to commands, status reports

Responses to commands and status reports are also prone to clipping.

```
Proper Klingon: {So'wI' vIchu'ta'} <I have engaged the cloak-
    ing device.>
Proper Klingon: {So'wI' chu'lu'ta'} <The cloaking device
    has been engaged.>
Clipped Klingon: {So'wI' chu'ta'} <Cloaking device engaged.>
        ({So'wI'} <cloaking device,> {vIchu'ta'} <I have engaged it,>
        {chu'lu'ta'} <it has been engaged>)
```

```
In the preceding example, the clipped form can correspond to either a dropping of the prefix \(\{v I-\}<I--i t>\) or the suffix \(\left\{-1 u^{\prime}\right\}\) <indefinite subject.>
Proper Klingon: \{jIyajchu'\} <I understand clearly.>
Clipped Klingon: \{yajchu'\} <Understood clearly.>
(\{yaj\} <understand,> \{-chu'\} <clearly, perfectly>)[[p.74]]
In this final example, the clipped form, lacking the pronominal prefix \{jI-\} <I,> is a likely response to a question in clipped form, such as \{yaj'a'\} <Understood?> (compare Proper Klingon \{bIyaj'a'\} <Do you understand?>).
```

### 7.3. Duress, excitement

When in a situation of great danger or when immediate action may be necessary, a Klingon is apt to drop pronominal prefixes. This clipped form is also common when a Klingon is excited for some reason.

Proper Klingon: \{qama'pu' vIjonta' vIneH\} <I wanted to capture prisoners.>
Clipped Klingon: \{qama'pu' jonta' neH\} <Wanted prisoners!> (\{qama'pu'\} <prisoners,> \{vIjonta'\} <I captured them,> \{vIneH\} <I want them>)

In context, it would be clear that the speaker is the one doing the wanting (and capturing), even though the pronominal prefix $\{v I-\}<I--t h e m>$ is missing. [[p.75]]

DICTIONARY[[p.77]]

INTRODUCTORY REMARKS

This dictionary contains four parts: (1) Klingon to English, (2) English to Klingon, (3) list of apexes in Klingon alphabetical order, (4) list of affixes in English alphabetical order.

Klingon alphabetical order is as follows:

```
{a, b, ch, D, e, gh, H, I, j, l, m, n, ng,
o, p, q, Q, r, S, t, tlh, u, v, w, y, '}
```

Note that $\{c h, ~ g h, ~ n g$,$\} and \{t l h\}$ are considered separate letters. Thus the syllable \{no\} would precede the syllable \{nga\} in the Klingon list.

Each Klingon word is tagged as to type (noun, verb, etc.). This tag occurs at the end of the English translation. The abbreviations used to indicate word types are:

| adv | adverbial | (section 5.4) |
| :--- | :--- | :--- | :--- |
| conj | conjunction | (section 5.3) |
| excl | exclamation | (section 5.5) |
| n | noun | (section 3) |
| num number | (section 5.2) |  |
| pro | pronoun | (section 5.1) |
| ques | question word | (section 6.4) |

v verb (section 4)[[p.78]]

In looking through the dictionary, it will be noticed that there are a number of noun/verb pairs; that is, the same word is both a noun and a verb. Futhermore, there are some words [[Futhermore=>Furthermore]]
which are identical in form (and nearly identical in meaning) to some suffixes (for example, \{laH\} is a noun meaning <accomplishment> and $\{-l a H\}$ is a verb suffix meaning <can, able>).

There are also a number of Klingon synonyms; that is two Klingon words with identical meanings (for example, \{joh, jaw\}[[joh=> joH] ]
<lord,> \{chetvI', DuS\} <torpedo tube>). Occasionally one member of such a synonym set can be analyzed. Thus, \{baHwI'\} <gunner> consists of the verb $\{b a H\}<$ fire (a torpedo) > plus the suffix $\left\{-w I^{\prime}\right\}$ <one who does something.> The other word for <gunner,> \{matha', \} [[matha'=>matHa'] ]
remains impervious to analysis. Sometimes one member of a set may be partially analyzed. For example, \{jonta'\} <engine> begins with \{jon,\} which is also found in \{jonwI'\} <engineer, > and ends with \{ta',\} which also occurs in \{mIqta'\} <machinery.> The other members of these synonym sets, \{QuQ\} <engine> and \{jo'\} <machinery,> cannont be further analyzed. (It is likely that[[cannont=> cannot] ]
there are sets of synonyms with three or more members, but none has been found to date.)

It has not yet been possible to determine how, or whether, the synonyms are used differentially. Perhaps there is a suggestion of Klingon social structure hidden here, for many of the synonym sets are words relating to military or governmental rank (such as \{yaS, 'utlh\} <officer>). On the other hand, some of the pairings are words referring to mechanics or engineering (such as <engine> and <torpedo tube, > as illustrated above). Perhaps a more thorough understanding of Klingon technology would reveal that there is indeed a difference in meaning among members of each set. Despite the current incomplete understanding of synonyms, the student of Klingon can be relatively assured that no major social blunder will be committed by choosing one rather than the other member of a synonym set.

These various pairings (noun/verb, word/suffix, synonym sets) are of great historical interest, for they surely indicate something about earlier stages of the language. Unfortunately, a linguistic history of Klingon is beyond the scope of the present work.

For ease of reference, English entries in the English-[[p.79]] Klingon section of this dictionary begin with the word that the user would most likely be looking for, even though this may at times be grammatically incorrect. This first word is, when appropriate, followed by the correct translation. For example, English adjectives (e.g., <bold>) correspond to Klingon verbs, most accurately translated using the English verb <to be> (e.g., <be bold>). All such words are entered with the adjective first, followed by the accurate translation (e.g., <bold, be bold>). Similarly, when a Klingon word is translated into an English phrase (e.g., <have a headache>), the first word in the English entry is the key word in the phrase, followed by the proper translation (e.g., <headache, have a headache>). 4. Special number suffixes
```
ordinal numbers (<first, second,> etc.) -DIch
<once, twice, three times,> etc. -logh[[p.169]]
```

APPENDIX

For those who want to make an attempt at speaking Klingon without reading the grammatical description of the language, a rough pronunciation for each expression is given as a guide. The letters can be read with their normal English values, with the followng special conventions:

```
<a> as in <pa>
<e> as in <pet>
<i> as in <pit>
<o> as in <go>
<oo> as in <soon>
<ow> as in <cow>
<y> as in <cry (when used as a vowel)>
<kh> as <ch> in German <Bach> or Scottish <loch>
<gh> as a softer <kh,> with humming (or voicing) at the
        same time
```

    In words of more than one syllabe, stressed syllables are
    written in all capital letters.
Those who follow the rough pronunciation without learn-
ing the proper Klingon pronunciation described in section 1
of this dictionary should be aware that they will be speaking
with a strong Terran accent.[[p.170]]

ENGLISH
PRONUNCIATION
Yes.
khish-LAKH
No.
Well! Aha!
How did this happen?
What's going on?
I don't understand.
I don't care.
No problem!
Do you speak Klingon?
Da-jatl-A
I cannot speak Klingon.
lakh-BE
Where is a good
kkhe
restaurant?
Where is the bathroom?
How much fuel do we
GHAJ
have left?
I won't (do it)!
Feed him!
You are right.
You are wrong.
Am I disturbing you?
It's not my fault.
BE
My chronometer has stopped.

INTRODUCTION TO THE
ADDENDUM
The original edition of this dictionary was never intended to contain a complete description of the Klingon language, but only an outline of some of its more important grammatical features and a representative sample of its vocabulary. Since its appearance, study of the language has continued and a great deal more has been learned. Unfortunately, due to a number of factors, including the recession currently affecting most of this sector as well as recent political changes, research funds have become more difficult to come by, delaying the completion of analysis of the language. Indeed, work has been stalled on a number of worthwhile projects, including the <Klingon Encyclopedia> and the <Romulan Chrestomathy.> Nevertheless, enough new information has been gleaned about Klingon that adding an addendum to the dictionary, even a brief one, seems beneficial.

In this addendum, the section-numbering system used in the main body of the dictionary is employed so that cross references may be easily made.

Once again, the author would like to thank the Federation Scientific Research Council for its support of this project, and, more importantly, would like to give credit to those who really make this effort possible: the increasing number of Klingons who are eager to share their language and culture with the rest of us. \{taHjaj boq.\}[[p.174]]
3. NOUNS
3.3.1. Type 1: Noun Suffixes: Augmentative/diminutive
\{-oy \} <endearment>
This is an infrequently used, but nonetheless very interesting noun suffix. It is a very peculiar suffix because it is the only suffix that begins with a vowel rather than a consonant. (Though there are no examples, it is suspected that for those few nouns which end in a vowel, \{'\} is inserted before this suffix.) The suffix usually follows a noun referring to a relative (<mother, father,> etc.), but it could also follow a noun for an animal, especially a pet, and means that the speaker is particularly fond of whatever the noun refers to. It is strongly suggested that non-native speakers of Klingon avoid this suffix unless they know what they are getting into.

```
{vav} <father> {vavoy} <daddy>
{be'nI'} <sister> {be'nI'oy} <sis>[[p.175]]
```

```
4.2.6. Type 6: Verb Suffixes: Qualification
    {-ba'} <obviously>
    This suffix is used when the speaker thinks that his or her
assertion should be obvious to the listener. Nevertheless,
there is still room for doubt; the suffix does not imply as
strong a conviction as {-bej} <certainly.>
    {nepwI' Daba'} <he/she is obviously lying> ({nepwI'} <liar,>
    {Da} <act in the manner of, behave as>)
```

4.2.9. Type 9: Verb Suffixes: Syntactic markers
\{-mo'\} <because>
This suffix is identical to the Type 5 noun suffix $\left\{-m o^{\prime}\right\}$ and
has the same meaning, <due to, because of.>
\{bIganmo'\} <because you are old> (\{gan\} <be old>)[[gan=>qan]]
\{Heghpu'mo' yas\} <because the officer died> (\{Hegh\} <die,>
\{yaS\} <officer>)
\{-jaj\} <may>
This suffix is used to express a desire or wish on the part of
the speaker that something take place in the future. When it[[p.176]]
is used, there is never a Type 7 aspect suffix. \{-jaj\} is often
translated with <may> or <let,> and it is particularly useful when
placing a curse or making a toast.
\{jaghpu'li' DaghIjjaj\} <may you scare your enemies>
(\{jaghpu'lI'\} <your enemies,> \{ghIj\} <scare>)
\{tlhonchaj chIljaj\} <may they lose their nostrils>
(\{tlhonchaj\} <their nostrils,> \{chIl\} <lose>)
\{-ghach\} <nominalizer>
In Klingon, there are many instances of nouns and verbs
being identical in form (e.g., \{ta'\} <accomplishment, accom-
plish>). It is not known if all verbs can be used as nouns, but it
is known that verbs ending in suffixes (such as \{-Ha'\} <undo> in
\{lobHa'\} <disobey>) can never be nouns. The Type 9 suffix
\{-ghach,\} however, can be attached to such verbs in order to
form nouns. Compare the following sets:
\{lo'\} <use> (noun) (\{lo'\} <use, make use of $>$ )
\{lo'laHghach\} <value> (\{lo'laH\} <be valuable>)
\{lo'laHbe'ghach\} <worthlessness> (\{lo'laHbe'\} <be worthless>)
\{naD\} <commendation> (\{naD\} <commend>)
\{naDHa'ghach \} <discommendation>
(\{naDHa'\} <discommend>)
\{naDqa'gha'ch\} <re-commendation> (\{naDqa'\} <commend>[ [gha'ch=>
ghach]]

```
<again>)[[p.177]]
```

5. OTHER KINDS OF WORDS

### 5.4. Adverbials

The list of adverbials given in the original dictionary can be expanded by the addition of the following:
\{ghaytan\} <likely>
\{jaS\} <differently>
\{nIteb\} <alone, acting alone, on one's own>
\{pe'vIl\} <forcefully>
\{SIbI'\} <immediately>
The earlier belief that adverbials come only at the beginning of sentences turns out to be not quite accurate. For a more correct description, see Section 6.7.

There is a second word (in addition to \{neH\} <only, merely>) which fits into this category despite its very peculiar behavior:
\{jay'\} <intensely>
This word not only intensifies whatever is being said, it turns the whole phrase into an invective. Alone among the adverbials, \{jay'\} always comes at the end of the sentence.
\{qaStaH nuq jay'\} <What the \#\$*@ is happening?> (\{qaStaH\} <it is occurring,> \{nuq\} <what?>)
[ [p.178]]
\{mIch 'elpu' jay'\} <They've entered the \#\$\%@ sector!> (\{mIch\} <sector,> \{'elpu'\} <they've entered it>)
5.5 Exclamations[[5.5=>5.5.]]

As it turns out, cursing is a one art among Klingons. There are many more curses than those three listed in the earlier edition of the dictionary. It is not always clear how to use the curses, but some are certainly epithetical (used for name-calling), while others seem to have a more general application. A few additional curses are listed below.

| <Epithets> | <General invective> |
| :--- | :--- |
| \{petaQ\} | \{va\} |
| \{toDSaH $\}$ | \{ghay'cha'\} |
| \{taHqeq\} | \{baQa'\} |
| \{yIntagh\} | \{Hu'tegh \} |
| \{QovpatIh \} |  |

The invective \{va\} is actually just a shortened form of \{Qu'vatlh.\} Note also that the adverbial \{jay'\} <intensely> is invective in force (Section 5.4.).[[p.179]]

## 6. SYNTAX

```
6.4. Questions
Tag questions (ending a statement with a question such as
``right?'' or ``isn't that so?'') are formed by using the verb {gar}
[[gar=>qar]]
<be accurate> plus the suffix {-'a'} <interrogative.> This word either
follows the verb or else comes at the end of the sentence.
Both of the following are correct:
{De' Sov qar'a' HoD}
{De' Sov HoD qar'a'} <The captain knows the>
<information, right?> ({De'}
    <information,> {Sov} <he/she knows it,>
    {HoD} <captain>)
```

6.7. Placement of adverbial elements

It was earlier thought that all adverbials (except \{neH\} <only>) come at the beginning of the sentence. This is frequently the case, but what is really going on is that the adverbial precedes the object-verb-noun construction. It is possible for an element of another type to precede the adverb. Most commonly, this is a time element (a noun or phrase meaning <today, at six o'clock,> etc.).

```
{DaHjaj nom Soppu'} <Today they ate quickly> ({DaHjaj}
    <today,> {nom} <quickly,> {Soppu'} <they>
    <ate>)[[p.180]]
```

The adverbial may actually follow the object noun (but
still precede the verb) when the object noun is topicalized by
means of the noun suffix \{-'e'\} (see Section 3.3.5.).
\{HaqwI' 'e' DaH yISam\} <Find the SURGEON now!>[ [HaqwI' 'e'=>
HaqwI''e']]
(\{HaqwI'\} <surgeon,> \{DaH\} <now,>
\{yISam\} <find him/her!>)

### 6.8. Indirect objects

While the object of the verb is the recipient of the action, the indirect object may be considered the beneficiary. In a Klingon sentence, the indirect object precedes the object and is suffixed with the Type 5 noun suffix $\{-v a D\}<f o r$, intended for.> The suffix may be attached to either a noun or a pronoun.

```
{yaSvaD taj nobpu' qama'} <The prisoner gave the officer>
<the knife> ({yaS} <officer,> {taj}
<knife,> {nobpu'} <gave,> {qama'}
<prisoner>)
{chaHvaD Soj qem yaS} <The officer brings them food>
    ({chaH} <they,> {Soj} <food,> {qem}
    <bring,> {yaS} <officer>)[[p.181]]

THE
KLINGON
DICTIONARY
Finally, a comprehensive sourcebook for Klingon language and syntax! The only one of its kind, this dictionary includes fundamental grammar rules, words, and expressions that illustrate the nature of the complex Klingon culture, as well as:

- A precise pronunciation guide
- Commands in Clipped Klingon
- Proper use of affixes and suffixes[[affixes=>prefixes]]
- Conjuctions, exclamations and superlatives
- Simple and complex sentence structure

PLUS: The Klingon translation and pronunciations of representative phrases like ' $A l w a y s$ trust your instincts,'' '`Activate the transport beam,'' and `'Surrender or die.''

Marc Okrand designed and developed the Klingon language and culture for the STAR TREK® feature films and STAR TREK

THE NEXT GENERATION®.
